**DIRECTIONS FOR USE**

Pro-Vide is for suppression of fruit russetting of Delicious apples (Goldens and Reds). Pro-Vide is a plant growth regulator containing gibberellins A<sub>1</sub>A<sub>2</sub> which may reduce the development of physiological fruit russetting in Delicious apples when applied in a post-bloom spray program. Used in years when russet conditions are present, Pro-Vide may boost overall fresh market grades of the crop. Physiological russetting is generally associated with the presence of water on the fruit surface during the first 30-40 days of fruit development. Russet severity at a given location is therefore specifically influenced by the weather conditions during and following the bloom period. The key conditions influencing russet include precipitation, humidity, and temperature. Pro-Vide may act only on that russet caused by climatic factors active early in fruit development and will not reduce damage associated with mechanical forces such as limb or pedicel rub, or insect damage.
