Revision of DIPEL WP Label

DIPEL for Forest, Ornamental and Shade Trees

Pest	Pounds/100 Gal* (Ground Application)	Pounds/Acre** (Aerial Application)
Gypsy Moth (Northeastern U.S.)	1/2 to 1	1
Spring & Fall Cankerworm	1/4 to 1/2	1/2
Forest Tent Caterpillar	1/2	1/2

\*Rate for hydraulic sprayer. For mist-blowers mix the applicable amount (lbs) per 10 gallons of water.

\*\*For aerial application apply the applicable amount (lbs) per acre in one (1) to five (5) gallons of water depending on type and density of trees. Spray when egg hatch is essentially complete and larvae are between the 1st and 3rd instars. Leaf expansion at this time should be 25 - 50 percent. Repeat application in approximately 10-14 days if significant reinfestation or extended egg-hatch occurs. For best results, spray systems which deliver droplet sizes of 100 - 200 microns should be used.
