FUNGICIDE

## DIRECTIONS FOR USE

Apple and Peach Koloform is a wettable sulfur designed for use in the control of brown rot and scab on peaches and control of scab, powdery mildew and cedar rust on apples. Applications should be made during the bloom, petal fall and shuck fall stages of growth and at 7 to 14 day intervals (in accordance with local recommendations) thereafter at the rate of 6 pounds Apple and Peach Koloform per 100 gallons water.

Apple and Peach Koloform may also be used on certain other crops when a wettable sulfur is suitable for control of certain insects or diseases.

Applications of spray or dusting materials containing sulfur should not be made just prior to or during periods of excessively high temperatures. Applications of sulfur should not be made two weeks before or after the application of an oil spray.

This product contains 13.5 percent bentonite sulfur.

Bentonite sulfur is made by the absorption of fused sulfur into bentonite in the proportions of thirty parts sulfur and seventy parts bentonite. A portion of the sulfur particles are very minute, some of them colloidal. The process of manufacture and the character of the sulfur particles impart to the product distinctive properties with respect to toxicity to certain fungi, persistence on plants, suspensibility in spray tank and safety to host plants.

## USAGE CAUTIONS

Rinse equipment and dispose of wastes by burying in non-crop lands away from water supplies. Bags should be disposed of by burning or burying with wastes. Keep out of smoke.
