# SUMMER FLOWABLE EMULSION LIGHT-MEDIUM

### DIRECTIONS FOR MIXING

Before using this product, be sure the spray tank is clean and contains just enough water to cover the agitator shaft. With the agitator in motion (120 RPM or more), add the amount of spray oil required for a full tank. Pump this mixture through the overflow and back into the tank for a minute or two. The mixture should turn white, indicating good emulsification, then fill the tank with water. Keep agitator running at all times.

If an injector is used, first add 25 to 50 gallons of water to tank with engine running to provide good pressure, then put injector suction tube into the measured amount of spray oil, opening injector valve to allow the oil to be sucked into the tank. Fill the tank with water.
