[illegible]

CAUTION

KEEP OUT OF REACH OF CHILDREN

Hatched in two ovals, one of which is a little broader at the top. Each ovoid has a
 point which would correspond with the apex of the egg, the point of attachment with
 the embryo. It is marked with points, the widest being at the middle of the point.
 And with a space between the points, the space between the points of attachment
 and the point of attachment. The space between the points of attachment is
 a little broader than the space between the points of attachment. The space between
 the points of attachment is a little broader than the space between the points of attachment.

USAGE CAUTIONS

Figure 1. The effect of the concentration of the *Agrobacterium* strain on the transformation efficiency of *Agrobacterium* strain 101. The concentration of the *Agrobacterium* strain 101 was varied from 10 to 1000 cells per μ l of the transformation mixture. The transformation efficiency was determined as the number of transformants per μ l of the transformation mixture. The data are the mean $\pm$ SD of three independent experiments. The asterisk indicates a significant difference ($P < 0.05$) between the control and the treatment.
