DO NOT USE IN TURF

AZAK B COATED GRANULES

GENERAL INFORMATION
 Niagara Azak B Coated Granules will control crabgrass when it is applied according to directions. It is nearly specific for crabgrass and has little or no effect on broad leaved weeds. Crabgrass is an annual grass that starts from seed produced the previous year and germinates in the soil as soon as the weather is sufficiently warm. Azak B Coated Granules as a pre-emergence herbicide, both prevents germination of crabgrass seed and kills small seedlings after they have absorbed the chemical through their roots. Azak B Coated Granules will not control mature or well established crabgrass. Azak B Coated Granules is recommended only for established lawns or other ornamental turf. It should not be applied to other crops or areas. Other grasses in established turf, such as quackgrass, annual bluegrass, or yellow foxtail, are not controlled.

At the recommended rate, grasses normally used on lawns, such as red fescue, bent, common bent, bluegrass, Merion bluegrass, St. Augustine, centipede, zoysia, hybrid and common Bermuda, and Dog-honda, are tolerant. Pests in excess of the recommended dosage may cause discoloration or thinning, particularly of fescue. Discoloration of bent and bluegrass from slight overdosage usually disappears.

DIRECTIONS FOR USE

Early application, before crabgrass germination, is essential for best results. Apply to well established lawns early in the spring before crabgrass seeds germinate. For fair to good quality lawns, driveways and other similar areas are suitable for crabgrass prevention and should be thoroughly treated. Application should be made before the first mowing of the growing season. Apply uniformly over the entire area of established turf at the rate of 125 pounds per acre, or 3 1/2 lbs. per 1000 square feet. Immediately after application, the treated area must be thoroughly irrigated to incorporate the material into the soil.

REGISTERED
 U.S. PAT. REGISTRATION NO. 272,237
 ACTIVE INGREDIENTS
 2,6-DI-TERT-BUTYL-P-CRESOL 92.5%
 Tartaric acid 7.5%
 INERT INGREDIENTS 100.0%

CAUTION

KEEP OUT OF REACH OF CHILDREN

As a precaution, do not use this product in areas with plants of water, fruit or vegetable crops. Do not use in contact with fertilizers, lime, or other soil amendments.

PRECAUTIONS
 Do not use on established lawns or other ornamental turf. Azak B Coated Granules is only for use on ornamental ornamental turf. DO NOT apply to other crops or areas.
 DO NOT use on areas that are to be seeded. Overseed or reseed areas that are to be seeded if desirable grasses. Azak B Coated Granules should not be used on the spring or areas that are to be seeded before the next fall. DO NOT seed and apply simultaneously. Do not apply before new seedlings are well established. Thinning or discoloration may occur during prolonged dry spells if used on pure stands of bent or fescue. Bare patches may occur on the turf if crabgrass removal usually will fall in with adjacent turf areas under proper fertilization and turf care. If seeding of these areas should be necessary, do not seed before fall following treatment in the spring.

Exposure of wastes to flowing water or to the ground may result from spillage of water, soil, etc. Empty containers should be cleaned with water. Do not reuse containers.
