PAR F 70 SOLUBLE OIL

USDA REG. NO. 279-2532

PROPOSED
DIRECTIONS FOR USE

On citrus: Niagara Par F 70 Soluble Oil is an emulsifiable spray oil intended for the control of scale insects (snow, soft brown, purple and Florida red), spider mites and whiteflies. Niagara Par F 70 Soluble Oil is suggested for use at a concentration of 0.8% to 1.0% (4 to 5 gallons per 500 gallons water) actual oil. For use in combination with ethion for control of scale insects a concentration of 0.4% to 0.6% (2.0 to 3.0 gallons per 500 gallons water) actual plus 2.5 - 3.75 pts. Ethion 4 Miscible or 5 - 7.5 lbs. Ethion 25 Wetttable Powder per 500 gallons or 5 pounds Parathion 15% Wetttable Powder (or equivalent) is suggested. The lowest rates are for light to moderate scale, spider and whitefly infestations while the higher rates are for moderate to heavy scale infestations. All dosage rates given are for 500 gallons finished spray. NOTE: Do not apply Parathion plus oil mixtures within 14 days of harvest nor more than 3 applications of such mixtures to any one crop. When used in combination with Ethion and if more than one treatment is necessary, do not apply within 90 days intervals. Do not apply more than twice per season on tangerines. May be applied up to day of harvest when used with Ethion. Refer to the Ethion and parathion product label for additional precautions when either of these are used in combination with Niagara Par F 70 Soluble Oil.
