Subject: Termiticides - Deletion of Rates Dragnet FT Termiticide LEPA Registration No. 279-3062 Biflex TC Termiticide EPA Registration No. 279-3112 Prevail FT EPA Registration No. 279-3082 Your Applications Dated May 31, 1994

13

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable, provided that you make the following labeling changes listed below before you release the product for shipment:

For termite use delete all rates on your label except those on the mixing table, volume adjustment table, foam application section and underground service application section. For example, on the Biflex label under Posts, Poles, and Other Constructions delete the 0.12% emulsion concentration. For non termiticide use pattern, variable rates are acceptable.

Submit three copies of your final printed labeling before you release the product for shipment. A stamped copy of the labeling is enclosed for your records.

Sincerely,

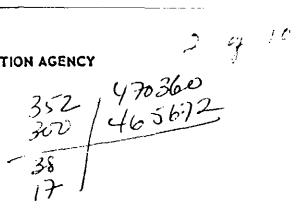

George T. LaRocca Product Manager 13 Insecticide-Rodenticide Branch Registration Division (7505C)

Subject: Protocol for Dermal Irritation; Adding Ornamental and Agricultural Premise Use Dragnet FT Termiticide EPA Registration No. 279-3062 Your Submissions Dated February 25 and June 30, 1994

The Precautionary Review Section (PRS) has reviewed your protocol for a new dermal irritation study. While the protocol has not been approved/disapproved, PRS has offered commentary to clarify their position regarding the study. Please refer to the enclosed review for more information. According to FMC's letter dated June 30, 1994, a final dermal irritation will be available approximately 5 months after acceptance of the protocol. Therefore please submit a completed study to EPA for review within 6 months of the date of this letter. Until review of that study we will not require any changes to your labeling's precautionary wording/statements or signal word.

The labeling referred to above, submitted February 25, 1994 in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable provided that you make the labeling change indicated below prior to release for shipment of product bearing the amended:

After the heading Ornamental Use add the following exclusionary language to remove your product from the scope of Worker Protection: "Ornamental Use (Not for use on plants being grown for sale or other commercial use, or for commercial seed production, or for research purposes. For use on plants intended for aesthetic...)."

U.S. Patent No. 4,024,163

KEEP OUT OF REACH OF CHILDREN CAUTION

See other panels for additional precautionary information.

STATEMENT OF PRACTICAL TREATMENT

If swallowed: Call a physician or Poison Control Center. Do not induce vomiting because of aspiration hazard.

If inhaled: Remove to fresh air. If discomfort or breathing difficulty occurs, obtain medical attention.

If on skin: Wash with plenty of soap and water. Get medical attention if initation persists.

For Emergency Assistance Call 1-800-331-3148.

PRECAUTIONARY STATEMENTS

Hazards to Humans (and Domestic Animals) CAUTION

Harmful if swallowed, inhaled or absorbed through the skin. Avoid conmathematic state with skin, eyes or clothing. Avoid breathing dust (vapor or spray mist) Wash thoroughly with scap and water after handling. Remove contaminated clothing and wash before reuse

FMC Corporation man and the states of a Agricultural Chemical Group Philadelphia PA 19103 5.24

Environmental Hazards

This product is highly toxic to bees exposed to direct treatment or residues on crops or weeds. Do not apply this product or allow it to drift to crops or weeds on which bees are actively foraging. Additional information may be obtained from your Cooperative Extension Service.

This product is extremely toxic to fish and aquatic invertebrates. Use with care when applying to areas adjacent to any body of water. Do not apply when weather conditions favor drift from treated areas. Do not contaminate water when disposing of equipment washwaters. Do not apply directly to water.

Physical/Chemical Hazards

Do not use or store near heat or open flame.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Shake Well Before Using

STORAGE AND DISPOSAL

Pesticide Storage

Store at temperatures above 40°F (5°C).

If separation occurs, and less than entire contents of container are to be used, remix by agitation. For the 1.25 and 2.5 gallon containers, invert and shake several times until contents are homogeneous. For the 5 gallon U-Turn® container, grasp handle and rock container forward and backward vigorously until con-tents are homogeneous. For 10 gallon U-Turn container, remix with mechanical agitator by attaching a power drill with 1/4 inch chuck to agitator shaft and agitating by spinning shaft for 1 minute phor to dispensing.

If crystals form, warm to room temperature 70°F (21°C) by room heating only for 24-48 hours and shake occasionally until crystals dissolve and product appears uniform. Do not use external source of heat for warming container

Do not use or store near heat, open flame or hot surfaces.

Keep out of reach of children and animals. Store in original con-Carefully open containers. After partial use, replace lids and close highly. Do not put concentrate or dilute material into food or drink containers. Do not containinate other pesticides, fertilizers, water, food, or feed by storage or disposal.

In case of spill, avoid contact, isolate area and keep cut animals and unprotected persons. Confine spills. Call FMC: 1-(800)-331-3148.

To confine spill: If liquid, dike surrounding area or absorb with sand, cat litter, commercial clay or gel absorbents. If dry material, cover to prevent dispersal. Place damaged package in a holding container. Identity contents.

Pesticide Disposal

Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according in label instruc-tions, contact your State Pespeide or Environmental Control Agency, or the Hazardous, Waste representative at the nearest EPA Regional Office for guidance.

Container Disposal Plastic Containers Triple rinse (or equivalent) Then offer for recycling or reconditioning, or puncture and depate of in a sam-tary landfill, or incineration, or, if allowed by state and local authorities, by burning If burned, stay out of smoke

Metal Containers. Triple rinse (or equivalent). This offer for recycling or reconditioning, or purchire and discuse of in a sanitary landfill, or by other procedures approved by state and locat authorities. Do not cut or weld metal containels

Returnable/Refillable Sealed Container. Ep. incl. rinse container Do not empty remaining formulated product. Do not break seals Return intact to point of purchase

General Information on the Use of This Product

Net for use on plants being grown for sale or other commercial use, or for commercial seed production, or for research purposes. For use on plants insended for aesthetic purposes or climatic modification and being grown in interior plantscapes, ornamental gardens or parts, or lawns and grounds.

Choice of appropriate procedures should include consideration of such ariable factors as the design of the structure, location of heating, ventitation, and air conditioning (HVAC) systems, water table, soil type, soil compaction, grade conditions, and location and type of domeses water supplies and utilities.

For advice concerning current control practices with relation to the opecific local conditions, consult resources in structural poet control and state cooperative extension and regulatory agencies.

SUBTERRANEAN TERMITE CONTROL

The use of this product prevents and controls termite infestations in and around structures and constructions.

The divise insecticidal emulsion must be adequetely dispersed in the soil to establish a barrier between the wood and the termines in the coil. As a good practice: 1) all non-essential wood and celluless containing materials should be removed from around foundation walts, crawl epaces and porches; 2) eliminate termite access to moisture by repairing faulty plumbing and/or construction grade. But around untreated structural wood in contact with soll should be treated as described below.

To establish an effective insecticidal berrier with this product the service technician must be familiar with current termite control practices such as: trenching, rodding, sub-stab injection, coarse fan spraying of soil surloss, crack and crevice (void) injection, excavated soil treatment, and orush or spray applications to infested or succeptible wood. These techniques must be correctly employed to prevent or control infestations by subterranean termites such as: *Coptotermes, Heterotermes, Reficul-termes* and *Zootermopale*. The biology and behavior of the species involved should be considered by the service technician in determining which control practices to use to stiminate ur prevent the termite infestation.

Important: Contamination of public and private water supplies must be avoided by following these precautions: Use anti-backflow equipment or procedures to prevent siphonage of insectcide into water supplies. Do not treat soil beneath structures that contain cisteries or wells. Do not treat soil bareath structures that contain cisteries or wells. Do not treat soil that is water saturated or frozen. Consult state and local speclifications for recommended distances of wells from treated areas, or if soil pregulations do not exact, refer to Federal Housing Administration becifications (H U.D.) for guidance.

Note: Crawlepaces are to be considered inside of the structure.

Critical Areas: Critical areas include areas where the foundation is penetrated by utility services, cracks and expansion joints, bath traps and areas where cement constructions have been poured adjacent to the foundation such as stars, pates, and elab additions.

Application Rate: Use a 0.5% emulsion for subterranean termites. For other pests on the label use specific listed rates.

Sixing: For the desired application rate, use the chart below to deterline the amount of Dragnet FT for a given volume of finished emulsion

Amount of Dregnet FT (Gallons except where noted)					
Emulsion Concentration	0.5%	1.0%	2.0%		
Desred Gallons of Finished Emulsion 1 5 10 19 38 58 96 192	1% ft. oz. 8% ft. oz. 16% ft. oz. 0.25 0.5 	3'/2 ft. oz. 16% ft oz. 33'/2 ft. oz. 0.5 1 1.5 2.5 5	8'5 ft. oz. 33'5 ft. oz. 88'5 ft. oz. 1 2 3 5 10		

Common units of measure:

1 pint = 16 fluid ounces (oz.) 1 gefon = 4 querte + 8 pints = 128 fluid ouncos (oz.)

Application Volume: To provide the greatest protection against termine reintestation for both pre and poet construction against termine tant to apply es close to labeled volume and rate of finished emutsion as is practical. To ensure thorough and complete coverage in different soil types, it may become necessary to adjust the volume being applied, provided there is a corresponding rate adjust the volume being applied, provided there is a corresponding rate adjust the same. In situations such active ingredient applied to the soil remains the same. In situations such as disy-rich cole which will not accept large amounts of water, reduced plumes of emulsion can be used which will deliver the appropriate connization of formiticide to the soil. The may also apply to sensitive these and/or applicatione where less volume may be desirable.

See Hackment 1

Where desirable for pre-and poal construction treatments, the volume of the 1.0% emulsion may be reduced by ½ the labeled volume ar a 2.0% emulsion may be applied at ½ the labeled volume (see Volume Adjustment Charl). Volume adjustments at 2.0% are not recommended for substab injection. See Volume Adjustment Charl below.

P.2

÷ŕ

4

1.0

asilons'

Note: When volume is reduced, the hole specing for subslab injection and soil radding may require similar adjustment to account for lower volume dispersel of the termiticide in the soil.

galions

Pre-Construction Subterranean Termite Treatmont

Effective pre-construction subternanean termite control is achieved by the establishment of vertical and/or horizontal inescificidal barriers using 0.5% emulsion of Dragnet FT. To meet termite proofing requirements, follow the procedures in the latest edition of the Housing and Urban Development Minimum Property Standards (refer to U.S.D.A. Home and Garden Bulletin No. 64).

Horizontal Barriers: Create a horizontal barrier wherever treated soil will be covered, such as focung trenches, slab floors, carports, and the soil beneath stairs and crawispaces.

To produce a horizontal insecticidal barrier, apply the emulsion at the rate of 1 gallon per 10 square feet to hill soil. If fill is washed gravel or other coarse material, apply at 1.5 gallone of emulsion per 10 square feet so that the emulsion will reach the soil barreath the fill. Applications shall be made by a low pressure apray (less than 50 p.s.t.) using a coarse spray nozzle. It slab will not be poured the same day as treatment, cover treated soil with a water-proof barrier such as polyethylene sheeting. This is not necessary if bundation walls have been installed around the treated soil.

Vertical Barriers: Vertical barriers should be established in areas such as around the base of foundations, plumbing, utility entrances, backfilled soil egainst foundation waits and other critical areas.

To produce a vertical barrier in soil, apply the emulsion at a rate of 6 gallong of emulsion per 10 linear feet per feat of depth. Distribute the treatment as evenly as possible.

- a. When rodding or trenching, it is important that emulaion reaches the top of the footing. Rod holes should be spaced to provide a continuous insecticidal barrier.
- b. Care should be taken to evoid soil wash-out around the feeting.
- c. Trenches need not be wider then 6 inches. Emulsion should be mixed with the soil as it is being replaced in the trench.

d. For a monolithic stab, an inside vertical barrier may not be required.

Hollow block voids may be treated at a rate of 2 gallons of emulsion per 10 linear leat so that the emulsion will reach the top of the footing.

Post-Construction Subterranean Termite Treatment

Use a 0.5% emulsion for post-construction treatment. Post-construction soil applications shall be made by injection, rodding, and/or trenching or coarse fan apray with pressures not exceeding 25 p.s.i. at the nozzle. Gare should be taken to avoid soil wash-out around the tooling.

Do not apply emulation until location of wells, radiant heat pipes, water and server lines and electrical conduits are known and identified, Caution must be taken to avoid puncturing and injection into these elements.

Sieles: Vertical barriers may be established by sub slab injection within the structure and rodding and/or trenehing outside at the rate of 4 gallone of emulsion per 10 linear test per toot of depth. Special care must be taken to distribute the treatment event/. Treatment should not extend below the bottem of the freetne.

Troat along the outside of the foundation and where necessary beneath the slab on the inside of foundation walts. Treatment may also be required beneath the stab along both sides of interior fuoting-supported walts, one side of interior partitions and along all cracks and expansion joints. Horizontal berriers may be established where necessary by longrodding or by grid pattern injection vertically through the slab.

- Brill holes in the slab and/or foundation to allow for the application of a continuous insecticidal barrier.
- b. For shallow foundations (1 feet or less) dig a nerrow tranch appraximately 6 inches wide along the outside of the foundation walls. Do not dig below the bottom of the feeting. The emulsion should be applied.

BEST AVAILABLE COPY

to the trench and soil at 4 gallons of emulsion per 10 linear feet per foot of depth as the soil is replaced in the trench.

c. For foundations deeper than 1 foot follow rate for basement.

d. Exposed soil and wood in bath traps may be treated with a 0.5% amulsion.

Basements: Where the footing is greater than 1 front in depth from grade to the bottom of the foundation, application can be made by trenching and/or rodding at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth. Sub-slab injection may be necessary along the inside of foundation walls, along cracks and partition walls, around pipes, conduits, piers, and along both sides of intenor footing-supported walls.

Crew! Speces: In craw! spaces vertical barriers may be applied at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth from grade to top of footing. Application may be made by rodding and/or trenching. If adequate ventilation is not available in the craw! space, see point "c" below. Treat both sides of the foundation and around all utility services.

- a. Rod holes should be spaced to provide a continuous insecticidal barrier. Treatment should not extend below the footing.
- b. Trenches need not be wider than 6 inches and not below the footing. The emulsion should be mixed with the soil as it is replaced in the trench.
- c. It is recommended that inadequately ventilated crawl spaces be brought into compliance with FHA Minimum Property Standards specifying 1 square foot of ventilator opening per 150 square feet of crawl space area.
- d. To prevent subterranean termites from constructing mudtubes between soil and crawl space wood members above, an overall soil treatment of this product may be applied. Remove all cellulose debris before application. Apply 1 gallon of emulsion per 10 square feet.
- e. For inaccessible crawl spaces, drill through the foundation wall or through the floor above and treat the soil perimeter at a rate of 4 nallons of emulsion per 10 linear feet per foot of soil depth. Apply to the soil surface of the crawl space with a coarse spray with pressures no. exceeding 25 p s i, at the nozzle. Apply at the rate of 1 gallon of emulsion per 10 square feet.

When treating plenums or crawl spaces, turn off the air circulation system of the structure until application-generated dust or spray mist has settled. Wear respiratory protection when treating crawl spaces.

Note: If treatment method "d" or "e" is used, children and pets should be kept out of treated area in crawl space until surface is dry

Masonry Voids: Treatment may be made through masonry voids such as concrete blocks and veneer to establish a continuous insecticidal barner at the top of the footing. Apply at the rate of 2 gallons of emulsion per 10 linear feet. Where this treatment is necessary, access holes in the blocks must be drilled below the sill plate and as close as possible to the footing as is practical.

Note: When treating behind veneer care should be taken not to drill beyond the veneer. If concrete blocks are behind the veneer, both the blocks and the veneer may be drilled and treated at the same time.

Excavation Technique: If treatment must be made in difficult situations such as near weils, cisterns, along fieldstone or rubble walls, along faulty foundation walls, and around pipes and utility lines which lead downward from the structure to a well or pond, application may be made in the following manner.

- Trench and remove soil to be treated onto heavy plastic sheeting or similar material
- b Treat the soil at the rate of 4 gallons of emulsion per 10 linear feet per foot of depth of the trench. Mix the emulsion thoroughly into the soil taking care to prevent liquid from running off the liner.
- After the treated soil has absorbed the liquid emulsion, replace the soil in the trench

Prior to using this technique near wells or cisterns, consult state, local or federal agencies for information regarding approved treatment practices in your area.

Foam Applications

1

}

Dragnet FT termiticide emulsion, from 0.5 to 2.0%, may be converted to a fearn with expansion characteristics from 2 to 40 times.

Localized Application

Foam may be used to treat voids to control or prevent localized infestations of termites, ants, bees, wasps or other arthropods harboring in voids Application may be made to voids such as behind veneers, piers (concrete or wood), chimneys, into rubble and stone loundations, into block voids, structural voids, (i.e. between stud walls), poles, stumps, and wood in crawlspaces using either the foam alone or in combination with liquid emulsion.

Note location of electrical sources prior to foarming voids to avoid possible shock hazard

Application Under Slabs or to Soli in Crawispaces to Prevent or Control Termites

Application may be made using Dragnet FT foam alone or in combination with liquid emulsion. The equivalent of at least 4 gallons (6 4 ounces of Dragnet concentrate) of 0 5% emulsion per 10 linear feet (vertical barner), or at least 1 gallon (1.6 ounces of Dragnet concentrate) of 0 5% emulsion per 10 square feet (horizontal barrier) must be applied either as emulsion, foam, or a combination of both. For a foam only application, apply C i agner FT concentrate in sufficient foam concentration and foam volume to deposit 6.4 ounces of concentrate per 10 linear feet or 1.6 ounces of concentrate per 10 square feet. For example, 1 gallon of 2% emulsion generated as foam to cover 10 linear feet is equal to the application of 4 gallons of 0.5% emulsion per 10 linear feet.

9

Ę

10

SAND BARRIER INSTALLATION AND TREATMENT

Termites can build mud tubes over treated surfaces as long as they have access to untreated soil and do not have to move Dragnet FT treated soil. Fill in cracks and spaces with builder's or playbox sand and treat the sand with Dragnet FT. The sand should be treated as soil following the termitcide rate listed on the Dragnet FT label.

Retreatment Restrictions: Retreatment for subterranean termites should be made when there is evidence of reinfestation subsequent to the initial treatment, or there has been a disruption of the chernical barrier in the soil due to construction, excavations, landscaping, etc. Retreatments should be made as a spot treatment to these areas.

Retreatments may be made to vulnerable areas in accordance with the application techniciues described above. This application should be made as a spot treatment to these areas. Routine or annual retreatment of the entire premises should be avoided.

SPECIFIC PEST CONTROL APPLICATIONS

Underground services

Such as: wires, cables, utility lines, pipes, conduits, etc. Services may be within structures or located outside structures, in right-of-ways or to protect long range (miles) of, installations of services.

Soil treatment may be made using 0.5 to 1 0% Dragnet FT emulsion to prevent attack by termites and ants

Apply 2 to 4 gations of emulsion per 10 linear feet to the bottom of the trench and allow to soak into the soil. Lay services on the treated soil and cover with approximately 2 inches of fill soil. Apply another 2 to 4 gations per 10 linear free over the soil surface to complete the treatment parter. In wide trenches, only treat the soil in the area near the services. It is important to establish a continuous parter of treated soil surrounding the services.

Where soil will not accept the above labeled volume, 1 to 2 gallons of 1 0% Dragnet FT may be used per 10 linear feet of trench both to the bottom of the trench and over the soil on top of the services.

Finish filling the trench with untreated fill soil. The soil where each service protrudes from the ground may be treated by trenching/rodding of no more than 1 to 2 gallons of emulsion into the soil.

Precautions:

Do not treat electrically active underground services

Posts, Poles, and Other Constructions

Create an insecticidal barner in the soil around wooden constluctions such as signs, fences and landscape ornamentation by applying a 0.5% to 1.0% emulsion.

Previously installed poles and posts may be treated by sub-surface injection or treated by gravity flow through holes made from the bottom of a trench around the pole or post. Treat on all sides to create a continuous insecticidal barner around the pole. Use 1 gallon of emulsion per foot of depth for poles and posts less than six inches in diameter. For larger poles, use 1.5 gallons of emulsion per four of depth. Apply to a depth of 6 inches below the bottom of the wood. For larger constructions, use 4 gallons per 10 linear tect per four of depth.

Treatment of Wood-in-Place for Control of Wood-Infesting Insects

(Localized Areas in Structure)

For the control of insects such castermites, and, carpenter ants, and wood infesting beetes such as yild House Borer and Powder Post in localized areas of infested word in and around structures, apply a 0.5% emulsion to voids and galleries in damagod wood and in spaces between wooden members of a structure and between wood and foundations where wood is vulnerable. Paint on or fan spray applications may also be used. Plastic sheeting must be placed immediately below overhead areas that are spot treated except for 3 ill surfaces in crawlspaces. Application may be made to inaccessible areas by drilling, and then injecting emulsion with a crack and crevice injector into the dam-

aged wood or void spaces. This type of application is not intended to be a substitute for soil treatment, mechanical alteration or fumigation to control extensive infestation of wood-infesting insects.

Control of Bees and Waspa Indoora: To control bees, wasps, homets, and yellow jackets apply a 0.5% emulsion. Application should be made in the late evening when insects are at rest. Spray liberally into hiding and breeding places, especially under attic rafters, contacting as many insects as possible. Repeat as recossary.

Termite carton nests in trees or building voids may be injected with 0.5% to 1.0% emulsion. Multiple injection points to varying depths may be necessary. It is desirable to physically remove carton nest material from building voids when such nests are found.

Important: Do not apply emulsion until location of heat pipes, ducts, water and sewer lines and electrical conduits are known and identified. Caution must be taken to avoid puncturing and injection into these structural elements. Do not apply into electrical fittures, switches, or sockets.

GENERAL INFORMATION

Dragnet FT is to be used for residual pest control in and on buildings and structures and their immediate surroundings and on modes of transport. Permitted areas of use include, but are not limited to industrial buildings, houses, apartment buildings, laboratories, buses, greenhouses and the non-food/leed areas of stores, warehouses, vessels, railcars, trucks, trailers, aircraft, schools, nursing homes, hospitals (non-patient areas), restaurants, hotels, and food manufacturing, processing and servicing establishments.

Do not tank mix this product with dichlorvos (DDVP) containing products. Can be tank-mixed with kisect Growth Regulators (IGR's) or pyrethnn-

ntaining products. When mixing Dragnet FT with other products, serve all precautions and limitations on the labels of each product. To prepare the emulsion, dilute Dragnet FT with water only. To prepare a

0.50% emulsion, mix 1.6 oz. (50 ml) in 1 gallon of water

Dragnet FT is an emulsifiable concentrate to be diluted with water and used to control pests in and around homes and other structures. The pests controlled are listed in the accompanying tables

Dragnet FT may be used as a broadcast or spot application to carpeting, wood, home or residential lawns only and soil (crawl space and perimeter) and as a crack and crevice injection, or paint-on treatment. Crawlspaces are considered inside the structure. Consult tables for specific use instructions.

Broadcast Treatment of Wood for the Control of Wood-Infesting Insects and Nuisance Pests Outside of Structure

Apply a 0.5% emulsion with a fan spray using a maximum of 25 psi. Treatment should be made just to the point of runoff

To control wood-infesting insects active inside trees, utility poles and/or fence posts, drill to find the interior infested cavity and inject a 0.5% emulsion. To control bees, wasps, homets, and yellow-jackets, apply in late evening when insects are at rest. Aim spray at nest openings in

round, bushes and in cracks and crevices which may harbor nests, sat-

)ung nest openings and contacting as many insects as possible

Pests Under Slabs

Infestations of Arthropods, such as ants, cockroaches and scorpions inhabiting under liab area may be controlled by drilling and injecting or horizontal rodding and then injecting 1 gallon of a 0.5% to 1.0% emulsion per 10 square feet or 2 gallons per 10 linear feet.

Pest Control in Crawlspaces

Broadcast Dragnet FT at 0.5% to all surfaces in crawlspace to control ants, fleas, roaches, scorpions, or other anthropods. Product may also be applied through under structure insecticidal delivery systems such as piping or flexible tubing mounted under the structure. This treatment is not intended as a substitute for termite control. Treat surfaces to point of run-off. Keep children and pets off surface until dry.

Pest Control on Outside Surfaces and Around Buildings

Apply Dragnet* FT using a 0.5% emulsion as a residual spray to outside.

1

surfaces of buildings including, but not limited to, exterior siding, fotndations, porches, window frames, eaves, patios, garages, refuse dumps, residential lawns only such as grass areas adjacent or around private homes, duplexes, townhouses, condominiums, house trailers, apartment complexes, carports, garages, fence lines, storage sheds, barns, and other residential and non-commercial structures, soil, trunks of woody ornamentals and other areas where pests congregate or have been seen. Repeat treatment as necessary to maintain effectiveness.

Perimeter Treatment: Apply to a band of soil and vegetation 6 to 10 feet wide around and adjacent to the structure. Also, treat the foundation of the structure to a height of 2 to 3 feet. Use a spray volume of 2 to 10 gallons of emulsion per 1000 square feet. Higher volumes of water may be needed if mulch or leaf litter is present or foliage is dense. House siding may be treated if pests such as Gypsy moth adults and caterpliars, boxelder bugs, elm leaf beetles, earwigs or silverfish are present.

Pest	Specific	instructi	ons		
Ants Ant Mounds ¹ Armyworm Fire Ants Boes	Apply as a pinstream, as a fine/coarse, low pressure spray (20 psi or less), as a spot treatment or with a painibrush. Treat where pests are found or entry points of the structure such as window and door trames and along the foundation.

Nat for use in USDA Meat and Poulity Plants.

Use Dragnet FT to control pests listed in the following table by application of a 0.5% emulsion

11 7 . 4

Pest	Specific Instructions
Fleas	Prior to treatment, carpets and furniture should be vacuumed thoroughly and vacuum cleaner bag dis- carded in an outdoor trash container. Evenly apply a broadcast spray at a rate of 1 gallon/per 800 to 1600 square feet to infested areas such as crawlspaces, nugs, carpets, pet beds and other pet resting areas. Avoid wetting or soaking. For crawlspace applica- tions, the applicator must wear a respirator recom- mended by NIOSH for filtering spray mists and organic vapors. When treating upholstered furniture take care to treat between and under cushions. Pay particular attention to areas which are frequented by pets. Old pet bedding should be replaced with clean, fresh bedding after treatment. To control the source of flea infestations, pets inhabiling the treated premises should be treated with a flea-control product regis- tered for application to animals.
Pest	Specific Instructions
Centipedes Ants* Carpenter Ants* Fire Ants Bat Bugs Beed Bugs Bees and Wasps Carpenter Bees Boxelder Bugs Cockroaches Asian Cockroaches Asian Cockroaches Files—such as Drain, Cluster, House Earwigs Firebrats Ground Beetles Millipedes Pantry Pests** Such as: Flour Beetles, Indian Meal Moths Larder Beetles Pillbugs Scorpons Silverfish Sowbugs Spiders Carpet Bee	Apply crack and crevice, as a pinstream, as a fine/coarse, low pressure spray (20 psi or less), spot application or with a paint brush. Ornamental Use (Including plants Intended for aesthetic purposes or climatic modification and being grown in interior plantscapes, ornamental gardens or parks, or lawns and grounds)

1 4 1

General Application Instructions

Dragnet[®] is a 3.2 pounds per gallon formulation of the insecticide permethrin. Apply Dragnet[®] when insects appear or feeding is noticed. The higher rate should be used as pest populations increase. Repeat the application as necessary to maintain control. Dragnet[®] may be applied by ground equipment only. Use sufficient water to obtain full coverage.

Do not apply more than 2.0 lb, a.i./Alyear.

Dragnet[®] has demonstrated excellent plant safety; however, not all cultivars have been tested. Before treating large numbers of plants of a particular cultivar, treat a few plants and cuserve prior to full scale application.

Ì

)

Spray Drift Precautions: All ground application equipment must be properly maintained and calibrated using appropriate carriers.

Do not make ground applications during temperature inversions.

Make ground applications when the wind velocity favors on target product disposition (approximately 3 to 10 mph). Do not apply when wind velocity exceeds 15 mph.

Do not apply by ground equipment within 25 feet of lakes, reservoirs, rivers, permanent streams, marshes or natural ponds, estuaries, and commercial fish farm ponds.

CROP	PEST	RECOM- MENDED RATE	SPECIFIC INSTRUCTIONS
Ornamentals (including interi- orscapes, foliage and flowering plants, woody and herbacious non- edible orna- mentals and non-bearing plants of fruiting species)	Ants Aphids Bagworm Beet Armyworm Cabbage Looper Citrus Thrips Fungus Gnat Heliothis spp Japanese Beetles Lace Rug Leaf Feeding Caterpillars Leafminers Leafnoppers Leafnoppers Leafnoppers Leafulers Lygus Bugs Mealybugs Root Weevils (Aduit) Whiteflies	4 to 8 Fl. Oz. per 100 Gals — or — Broadcast 4 to 8 Fl. Oz. per Acre	Apply sufficient vol- ume of water to adequately cover foliage. Use higher rate for moderate to high infestations. Direct application to blooms may cause browning of petals Marginal leaf burn may occur on Salvia, Dieffenbachia and Pteris Fern
Coniters	Nantucket Pine Tip Moth Coneworms*	4 to 8 FI Oz per 100 Gals — or — Broadcast 4 to 8 FI Oz per Acre	Begin application when adults appear Repeat applications may be made on 5–7 day intervals as needed

Recommended Application Rates

*To control Coneworm —Use Dragnet[®] at the following rates For high volume sprayers. Use 8 ounces in 100 gallons of water. Apply 5 to 10 gallons of thished spray per tree

For low volume sprayers. Use 42 ounces in 100 gallons of water. Apply 1010 gallons per acre. To control Webbing Coneworm—make first application within 1 week of female flower closure or peak policin fight To control other coneworms --make first application within 30 days following flower closure

Applications to Agricultural Structures For Agricultural use only
