Special Handling Directions for Command 3ME

in 250 Gallon Bulkdrum III Containers

Equipment Requirements:

Command 3ME is a microencapsulated herbicide and requires a diaphragm type pump in order to maintain product quality. Do not use gear or piston-type pumps. The following pumps are suitable for moving Command 3ME from the 250 gallon Bulkdrum into spray tanks, mixing systems, or dedicated repackaging minibulk tanks*:

- Tuthill Fill-Rite Chemtraveller portable transfer pump
- Science Caddy-SS portable transfer pump
- Science DD6 pump
- Tuthill Fill-Rite Series 400 diaphragm pumps

Dispensing Instructions:

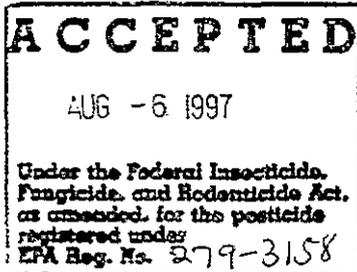

When ready to dispense Command 3ME from the Bulkdrum, the dealer/applicator must recirculate the product in the container for at least 15 minutes. This can be done by hooking a portable pump such as listed above to the bottom bung, opening the valve and directing the outlet nozzle into the 6" top port (seal must be broken). Directing the nozzle stream into the corners will ensure more complete turning of the product volume. Once the product is thoroughly recirculated, the dealer/applicator may then begin the process of dispensing Command 3ME into the dedicated repackaging minibulk container(s)*, or spray tank, loading or mixing system. Rinse the empty Bulkdrum container and transfer the rinsate directly to the mix or spray tank.

The dealer/applicator should wear proper protective clothing such as listed on the Command 3ME label.

Container Disposal:

Command 3ME Bulkdrums are returnable to FMC Corporation for reuse when the container is completely empty. Bulkdrums containing product in excess of 1 gallon cannot be accepted for return.

* Any dealer wishing to repackage Command 3ME must comply with all Federal, State and local laws pertaining to bulk herbicide handling and possess a signed repackaging agreement from FMC Corporation.

Special Handling Directions for Command 3ME in 110 Gallon Compack Containers

Equipment Requirements:

Command 3ME is a microencapsulated herbicide and requires a diaphragm type pump in order to maintain product quality. Do not use gear or piston-type pumps. This container has been fitted with a Scienco DD6 diaphragm type pump for recirculation and dispensing of product.

Dispensing Instructions:

When ready to dispense Command 3ME from the Compack, the applicator should recirculate the product in the container, if the product has settled or separated, for approximately 5 minutes or until the product is thoroughly turned over. The Scienco DD6 pump is equipped with recirculation capability. This allows for quick and efficient mixing of product which may have separated or settled in storage. To recirculate, press down the bypass pushrod lever to the locked position (slid under the motor) and turn on the motor. The discharge ball valve at the end of the hose must be closed before turning on the motor. Once the product is thoroughly recirculated, the applicator may then begin the process of dispensing Command 3ME into the spray tank, loading or mixing system.

The applicator should wear proper protective clothing such as listed on the Command 3ME label.

Container Disposal:

These containers are property of FMC Corporation and are returnable to FMC at FMC's discretion. These containers are provided for repackaging of Command 3ME* and should not be filled with any other product.

* Any dealer wishing to repackage Command 3ME must comply with all Federal, State and local laws pertaining to bulk herbicide handling and possess a signed repackaging agreement from FMC Corporation.

ACCEPTED
AUG -6 1997
Under the Federal Insecticide,
Fungicide and Rodenticide Act.
is amended, for the pesticide
