<p><u>Groundwater advisory:</u> The active ingredients in this product are known to leach through soil into groundwater under certain conditions as a result of label use. Use of this chemical in areas where soils are permeable, particularly where the water table is shallow, may result in groundwater contamination. Do not use on coarse soils classified as sand which have less than 1% organic matter.</p>	
<p><u>Surface water advisory:</u> F9001 HERBICIDE can contaminate surface water through spray drift. Under some conditions, F9001 HERBICIDE may also have a high potential for runoff into surface water (primarily via dissolution in runoff water), for several to many months post-application. These include poorly draining or wet soils with readily visible slopes toward adjacent surface waters, frequently flooded areas, areas overlying extremely shallow groundwater, areas with in-field canals or ditches that drain to surface water, areas not separated from adjacent surface waters with vegetated filter strips, and areas over-lying tile drainage systems that drain to surface waters.</p>	

GENERAL INFORMATION

F9001 is a selective pre-emergence and early post-emergence herbicide for control of crabgrass, annual grassed, broadleaf weeds and sedges in established lawns. Damage may occur to lawns that are not well established or stressed by unfavorable weather or disease.

1. *Poa annua* is a winter annual. Applications of F9001 should be made in August or September to established, non overseeded turf before *Poa Annua* germinates. Consult local Cooperative Extension Service for more specific applications timings for your local area since August and September are approximate timings.
2. Apply F9001 in late summer, fall or winter before weed germinates for control.
3. Crabgrass control in cool season grasses from fall application: Areas where the ground is subject to winter freezes, F9001 may be applied in the fall at rates listed in Table 1 (125 -292 lbs. per acre) for cool season grasses when soil temperatures are below 50°F, but prior to the ground freezing. This will provide control of crabgrass the following spring.
4. In areas of extended growing season and heavy pressure weed control will be enhanced by second application of F9001 60-90 days after initial application

POSTEMERGENT CONTROL OF ANNUAL, BIENNIAL & PERENNIAL BROADLEAF WEEDS, GRASSES AND SEDGES

1. Weeds are suppressed at lower label rates (<70 lbs/acre). For optimum control apply rates of at least 98 lbs per acre in a single application. Do not exceed the application rate specified for the turf species in Table 1.
2. F9001 controls crabgrass and goosegrass when applied postemergent to newly emerged weeds from the 1-4 leaf to the 2-4 tillering stage has been initiated.

Early Postemergence Control

Application of F9001 herbicide provides early postemergence control of crabgrass and goosegrass when applied by the 2-4 tillering stage of development. Applications should be made as soon as undesirable grass is observed for best results.
