DEEP TUNNELS: Remove center plug from the conical mounds with aid of a long handled spoon and drop 1 level tablespoon bait into the underground tunnel. Close opening with rock or sod.

BULB PROTECTION FROM MOLES: To protect bulbs against destruction by field mice and moles, pack about one quarter inch of soil against each bulb and then place a level tablespoonful around the bulb.

WARNING CONVULSIVE POISON: Do not contaminate feed and food-stuffs. Keep away from children, domestic animals, pets and game birds. Avoid breathing dust. Do not reuse container. Destroy empty containers by burying or burning. Do not breathe smoke. Where placement of strychnine-treated grain presents a hazard to wildlife or livestock, all placements must be made under existing or introduced cover of brush or weeds.

ANTIDOTE: First call a physician. If less than 10 minutes have passed since the poison was taken, induce vomiting by giving one tablespoonful of salt in warm water, strong mustard and water to empty the stomach. Keep patient quiet away from noise, in darkened room and help keep him warm.

U.S.D.A. Reg. No. 299-132

GOPHER BAIT

Special Formula
STRYCHNINE TREATED GRAIN BAIT

CONTENTS: ONE POUND

POISON

DANGER: Keep Out of Reach of Children

See Antidote statement and other warnings on side panel.

ACTIVE INGREDIENTS:

Strychnine Alkaloid30%
INERT INGREDIENTS:	99.70%
	<hr/> 100.00%

DIRECTIONS:

FOR POCKET GOPHER CONTROL: Burrowing pocket gophers throw out low, fan shaped mounds on either side of their underground tunnel. These lateral tunnels coming to the surface are on the flat side of the fan and are plugged with soil. With a long handled spoon carefully remove the plug. Insert bait (1 level tablespoon) as far down as possible. Reclose opening. One pound will treat 5 to 8 acres or one to two pounds will treat one acre when applied with a Burrow Builder Machine.

LAWN PROTECTION FROM MOLES: The presence of moles is indicated either by a net work of ridges in the turf or (when burrowing deeply) by a series of conical mounds of earth pushed up from below.

SURFACE RIDGES: Runways in which moles are active may be found by collapsing the ridges at scattered points about the premises. The next day the active ridged-tunnels will be re-constructed. Carefully punch a hole in the top of active tunnels, drop in 1 level tablespoon of bait, and carefully close the hole. Take care not to again collapse the tunnel or allow loose soil to cover the bait.
