DIRECTIONS FOR USE
(continued)

FOR USE IN POULTRY HOUSES

FOG APPLICATION: For flies, mosquitoes, wasps, and gnats: Fill room with mist. For best results, keep room lightly closed for 10 minutes. Ventilate building after fogging. For use in large commercial type thermal fogging machines, this product may be diluted 1 gallon to 6 gallons of diesel fuel.

SPRAY APPLICATION: For poultry red mites, ticks, certain fleas (see below), flies, mosquitoes, wasps, gnats, roaches, ants, and spiders: Apply undiluted as a coarse spray to point of runoff on interior surfaces of buildings, thoroughly wetting all areas, hitting as many insects as possible. Force spray into cracks, crevices and potential insect hiding places. Spray ant trails; treat door sills, window frames, and baseboards. Repeat as necessary. Not suitable for control of stick-tight fleas which frequently infest poultry houses in the South. Do not apply directly to animals, including poultry.
