UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

JUN 21 1989

Mr. Mike Compton  
J.C. Martin Company  
P.O. Box 1087  
Nacogdoches, TX 75963-1087

Dear Mr. Compton:

Subject: Tetrachlorvinphos Registration Standard  
Martin's Rabon Cattle Dust  
EPA Registration No. 299-188  
Your Letter Dated March 20, 1989

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable provided you make the labeling changes listed below before you release the product for shipment bearing the amended labeling:

1. Revise the Note to Physician as follows:

Note to Physician: Tetrachlorvinphos is an organophosphate insecticide. If symptoms of cholinesterase inhibition are present, atropine sulfate by injection is antidotal. 2-PAM is also antidotal and may be administered, but only in conjunction with atropine.

2. Either move DIRECTIONS FOR USE to the top of the left panel or add "DIRECTIONS FOR USE (continued)" to that panel.
3. The protective clothing paragraph should appear under the Precautionary Statements paragraph.
4. You may delete the bee toxicity paragraph since the use patterns do not present exposure to bees.

Submit five (5) copies of your final printed labeling before you release the product for shipment.

A stamped copy of the labeling is enclosed for your records.

Sincerely yours,

George T. LaRocca  
Product Manager (15)  
Insecticide-Rodenticide Branch  
Registration Division (H7505C)

Enclosure

## STORAGE & DISPOSAL

**STORAGE:** Do not store in areas of excessive moisture or humidity. Store in a well ventilated area away from heat and open flame.

**PESTICIDE DISPOSAL:** Do not contaminate water, food, or feed by storage or disposal. A spill resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

**CONTAINER DISPOSAL:** Completely empty bag into application equipment. Then dispose of empty bag in a sanitary landfill or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

**BEEF CATTLE DUST WITH RABON** is a ready-to-use insecticide dust which can be applied by hand or through the use of self-treating dust bags. There is no withholding period from last application to slaughter and no withholding period for use of milk.

**HAND DUSTING** - For the control of horn flies and as an aid in the control of face flies, apply approximately 2 oz. of dust by shaker can, rotary dust er, or by spoon to the upper portions of the back, neck, and poll, and to the face as an aid in the control of face flies. Rub lightly to carry the dust beneath the hair. Repeat as necessary.

**PROTECTIVE CLOTHING** - Wear long-sleeved shirt and pants; chemical resistant gloves; shoes and socks.

**SELF-TREATING DUST BAG** - For the control of horn flies and as an aid in the control of face flies and lice, put dust in cotton cloth or double burlap bags or use prepacked weather-proof cattle dust bags. Hang in barn door exits or alleyways leading from animal buildings, salt or mineral blocks, or watering holes. Protect cloth or burlap bags from weather. Dust bags may be used free choice in loafing pens, feedlots, near watering holes or other areas where cattle gather. The free choice use aids in the control of lice.
