

DIRECTIONS

For **POCKET GOPHERS** With the aid of a long handled spoon, remove soft earth plug leading underground at a freshly thrown out mound of soil. Using the long-handled spoon, introduce several tablets as far down into the burrow system as possible. Close the opening to the surface, being careful not to allow loose dirt to cover the bait. For **GROUND SQUIRRELS** 13-Lined Spermophile. Several tablets should be scattered in the entrance of their burrows. When properly distributed, there is little danger of poisoning livestock. However, the bait should not be exposed where hogs or poultry are likely to pick it up.

Birds feeding on treated areas may be killed.
