DIRECTIONS

To obtain contact and residual action against flies, mosquitoes, gnats, ants, roaches, silverfish, use a finished emulsion containing 2% by weight Chlordane (10 gallons of this concentrate in 100 gallons of water). Spray all infested areas such as hiding places and runways, around windows, doors, and areas frequented by these insects. Also porch areas and window screens outside so as to prevent entry of these insects into human dwellings. To control, treat ant trails and areas where these pests enter the premises, such as door sills and window frames. Repeat application when necessary.
