DIRECTIONS FOR USE

Always use clean equipment so as not to contaminate environment.
Be sure spraying equipment is thoroughly clean before use.

Mix product well in drum before use.

Best results are obtained by application when there is a slight breeze -
5 miles per hour or less. Fog with the breeze so that wind will carry
fog from roads or paths into the area to be treated. Repeat applications
as needed to obtain desired reduction in adult mosquito population.

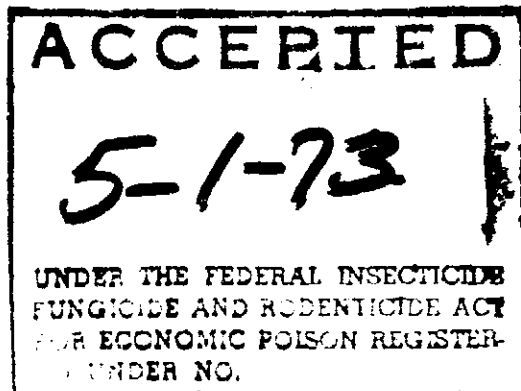

FOR TRUCK MOUNTED ULV COLD AEROSOL GENERATOR:

Objective is to treat terrain with 0.002 to 0.0025 pounds of pyrethrins
and 0.010 to 0.0125 pounds of piperonyl butoxide per acre. Fog with
a discharge rate of 2 to 2.25 fluid ounces per minute while machine is
moving 5 m.p.h. and pressure is set at 3 lbs./sq/in. Discharge nozzle
is positioned approximately 30° above horizontal off side of truck bed.
Delivery rate and traveling speed can be varied slightly so long as the
basic objective of 0.002 to 0.0025 pounds actual pyrethrins per acre is
maintained. Use swath width of 300 ft. for acreage calculations.

GENERAL:

This product is designed for use in cold aerosol generators which pro-
duce a fog in which the big majority of particles are in the 5 to 50
micron range.

This product may be used in mosquito adulticiding programs involving
residential and recreational areas, swamps, marshes, overgrown waste
areas, roadsides and pastures where adult mosquitoes are present in
annoying numbers.
