

**Pennswim Algae Blast Concentrate 63**

**DIRECTIONS FOR USE**

ALGAE BLAST CONCENTRATE 63 is especially designed for super-chlorination and algae control in above ground and vinyl lined pools. Before super-chlorination treatment, remove visible algae growth by brushing the affected surfaces. Adjust the pH of pool water to 7.4-7.6 by proper additives and then add ALGAE BLAST CONCENTRATE 63 at about 1 ounce per 1,000 gallons of water to establish the initial chlorine residual of at least 4 ppm, using suitable chlorine and pH test kits. If algae growth persists, the treatment should be repeated. Do not allow swimming in the pool during super-chlorination treatment until the residual chlorine in the pool water drops to below 2 ppm level.

**Warnings:** Keep out of reach of children. Corrosive to skin tissues. Harmful if swallowed. May produce severe chemical burns. Do not get in eyes, on skin or clothing. Causes eye damage.

Strong oxidant. Never mix with any materials other than water. Contact with foreign material, heat, moisture or contamination from any source may result in explosion or fire of great intensity with the liberation of hazardous and irritating gases. Do not repack. Use only a clean dry container or dispenser. Never mix with any other pool or household chemicals. Store in dry cool place in original container with cover closed. Dispose of spilled Algae Blast Concentrate 63 by flushing with water.

Rinse empty container thoroughly with water and discard it.

This product is toxic to fish. Treated effluent should not be discharged where it will drain into lakes, streams, ponds or public water. Apply this product only as specified on the label.

**First Aid:** In case of skin or eye contact, flush with plenty of water. If skin irritation persists, get medical attention. For eyes get prompt medical attention.

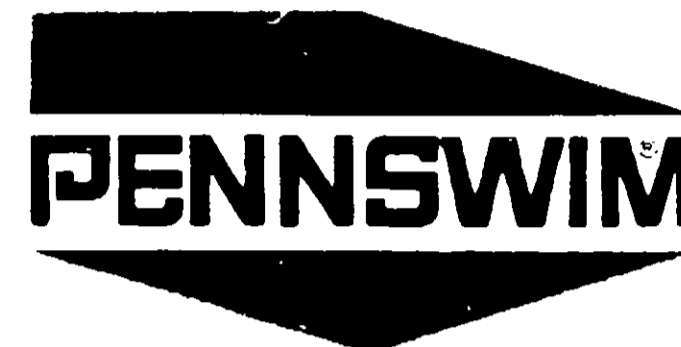

**Internal:**—give milk, water or egg whites. Call physician immediately.
