

Pennswim Algae Blast Concentrate 56

DIRECTIONS FOR USE:

ALGAE BLAST CONCENTRATE 56 is especially designed for super-chlorination and algae control in above ground and vinyl lined pools. Before super-chlorination treatment, remove visible algae growth by brushing the affected surface. Adjust the pH of pool water to 7.4-7.6 by proper additives and then add ALGAE BLAST CONCENTRATE 56 at about 1-2 ounces per 1,000 gallons of water to establish the initial chlorine residual of at least 4 ppm, using suitable chlorine and pH test kits. If algae growth persists, the treatment should be repeated. Do not allow swimming in the pool during super-chlorination treatment until the residual chlorine in the pool water drops to below 2 ppm level.
