Make a single application per year during the growing season with the following rates:

Soil Texture	Lbs. Hyvar X Per Acre
Sand, loamy sand	4 to 5
Sandy loam	5 to 6
Clay loam, clay, loam	6 to 8

After a single application, apply Hyvar X immediately with a hand-pump sprayer using at least 200 gal. spray per acre. For control of brush, apply Hyvar X immediately with a backpack sprayer. Coverage may be reduced.

Note: Partial control usually occurs with a single treatment. Repeat applications are required to control perennial grasses. Hyvar X controls the following:

Bermudagrass	All areas
Torpedograss, paragrass	All areas
Pangolagrass	All areas
Bahagrass	All areas
Johnsongrass	All areas
Nutsedge	All areas

Control of perennials may be improved by a second treatment. Otherwise, avoid working the soil. If a second control continues or else effect wears off, the treatment may be reduced.

Florida Only—Trees Established Less Than Four Years

Trees Established Less Than One Year: Apply 2 to 3 lbs. per acre as needed to maintain weed control. Do not apply at intervals less than sixty days. Do not apply more than 6 lbs. per acre within any 6 month period or more than 8 lbs. per acre during the first year.

Trees Established One to Four Years: Apply 2 to 4 lbs. Hyvar X per acre as needed for weed control. Use the lower rate for 1 to 2 year old trees and the higher rate for trees more than 2 years old. A second application may be made if needed, but do not apply more than 4 lbs. Hyvar X per acre per year as injury to the trees may result.

Torpedograss Control — Barrier Strip Treatment

For control of torpedograss adjacent to citrus groves, prevent spread of the weed into groves. Apply Hyvar X per acre. Treat a border strip 10 to 20 ft. wide adjacent to the citrus grove. Do not closer than 10 ft. to the edge of the trees. Examine treated area every four months after application and spot treat invading or surviving plants with 2 to 4 lbs. per acre (11 oz. per 1000 sq. ft.). For best results, apply in late winter or early spring after the torpedograss has broken dormancy and is actively growing. For later application where growth is rank, mow or cut the area prior to treatment.

PINEAPPLE

Do not replant treated areas to any crop other than pineapple within 2 years after last application as injury to subsequent crops may result.

Hawaii and Florida: For control of seedling weeds such as amaranthus, balsamapple, chlois, crabgrass, Florida paintbrush, foxtail, goosegrass, lemongrass, and Hairy, apply 2 to 6 lbs. per acre broadcast before the planting material begins to grow. Use the lower rates in low rainfall areas (5 to 10 inches annually) and on clean culture fields; use the higher rates in high rainfall areas (above 10 inches annually) and for trash-mulch fields. Follow with 2 to 4 lbs. per acre as directed interline spray on seedling plants after differentiation or apply 2 lbs. per acre broadcast after plants are 8 months old but before differentiation. Do not apply more than 16 lbs. total per acre per season. For ratoon crop, apply 1 to 4 lbs. per acre broadcast after harvesting plant crop but before differentiation. Do not apply more than 4 lbs. total per acre per ratoon crop.

Puerto Rico: For control of seedling weeds such as grass, goosegrass, jungle rice, pigweed and purslane, apply 2 to 4 lbs. per acre broadcast immediately after planting and before planting material begins to grow.
