DUPONT™ SINBAR® HERBICIDE

EPA Reg. No. 352-317

**DUPONT™ SINBAR® HERBICIDE FOR WEED CONTROL
IN STRAWBERRIES (EXCEPT CALIFORNIA)**

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. SINBAR® should only be used in accordance with the recommendations in this label.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

USE PRECAUTIONS AND RESTRICTIONS

Do not apply more than 8 ounces per acre per season of SINBAR® unless otherwise directed.

Do not apply within 110 days of harvest.

Do not apply SINBAR® to soils with less than 0.5% organic matter.

For soils with less than 2% organic matter, use as follows:

- For coarse soils (sands, sandy loam) with less than 1% organic matter, use a maximum of 3 ounces per acre per single application and a maximum of 6 ounces per acre per season.
- For coarse soils with less than 2% organic matter but greater than 1% organic matter, and for all medium and fine soils with less than 2% organic matter, use a maximum of 4 ounces per acre per single application and a maximum of 8 ounces per acre per season.

Avoid spray overlap, as crop injury may result.

A SINBAR® treatment may reduce runner production or plant stand.

A reduction in residual weed control may occur under adverse environmental conditions such as heavy rainfall or when low rates are used on soil high in organic matter.

Varieties

Strawberry varieties vary in their sensitivity to SINBAR®. Prior to adoption as a field practice, determine the varietal tolerance under expected field conditions to avoid the potential for widespread injury.

Rotational Guidelines

Alfalfa, apples, blueberries, mint, peaches, and strawberries may be planted one year after the last SINBAR® application. Do not plant any other crop within two years after application, as injury to the crop may occur.

**APPLICATION INFORMATION
MATTED-ROW STRAWBERRY PRODUCTION
SYSTEMS**

Planting Year

Apply 2 to 3 ounces of SINBAR® per acre after transplanting but before new runner plants start to root. If strawberry transplants are allowed to develop new foliage prior to SINBAR® application, the application must be followed immediately by 0.5 to 1 inch of irrigation or rainfall to wash the SINBAR® off the strawberry foliage. Otherwise unacceptable (severe) injury may result.

Apply 2 to 6 ounces of SINBAR® per acre starting in late summer or early fall for control of winter annual weeds. If strawberry plants are not dormant at the time of the SINBAR® application, the application must be followed immediately by 0.5 to 1 inch of irrigation or rainfall to wash the SINBAR® off the strawberry foliage. Otherwise unacceptable (severe) injury may result.

To extend weed control through harvest of the following year, apply 2 to 4 ounces SINBAR® per acre just prior to mulching in the late fall.

Harvest Years

After post-harvest renovation, before new growth begins in midsummer, apply 4 to 8 ounces of SINBAR® per acre.

To extend weed control through harvest of the following year, apply 4 to 8 ounces of SINBAR® per acre just prior to mulching in the late fall.

**ANNUAL PRODUCTION UNDER PLASTIC MULCH
(Florida Only)**

Make a once-per-crop application of 4 ounces of SINBAR® per acre after bedding but prior to transplanting. Rainfall or irrigation is required for SINBAR® activation.

IMPORTANT

BEFORE USING SINBAR®, READ AND FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS ON THE EPA-REGISTERED LABEL.

This bulletin contains new or supplemental instructions for use of this product which do not appear on the EPA-registered package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.
