1-24-2007 352-317 SUPPLEMENTAL LABELING all COPP Ü₽ONT™SINBAR® HERBICIDE JAN 24 2007 WEED CONTROL IN HYBRID **DuPont** Crop POPLAR PLANTATIONS Protection Under the Federal Inteols (in. **IN NEW MEXICO** Fungioide, and Redstroute Ace, as amended for the positions registered under EPA Reg. No. 352-317 DUPONTTM SINBAR® HERBICIDE

EPA Reg. No. 352-317

FOR WEED CONTROL IN HYBRID POPLAR PLANTATIONS IN THE STATE OF NEW MEXICO

DIRECTIONS FOR USE

SINBAR® herbicide controls specific weeds to aid in the establishment and growth of hybrid poplar plantings. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

SINBAR USE RATES AND RESTRICTIONS

Apply SINBAR® at 1 to 2 pounds per acre. Use 1 to 1 1/2 pounds per acre on coarse textured soils and 1 1/2 to 2 pounds per acre on medium to fine textured soils. Do not use on gravelly soils or on any soil having less than 0.5% organic matter as injury to trees may result.

APPLICATION TIMING

Apply in late winter or early spring as a uniform broadcast spray before or after planting but prior to bud swell, or as a directed spray after bud swell.

Preplant: If application is made prior to planting, take precautions to prevent treated soil (usually top 1") from coming into contact with roots of trees during the planting process as injury may result.

Postplant: If application is made after planting, it is best to wait until rain or irrigation has settled the soil around the newly planted trees before applying DuPont[™] SINBAR®. If trees are dormant, a broadcast application can be made. If buds have started to swell, use a directed spray pattern that prevents SINBAR® from contact with trees as injury may result.

For Best Weed Control Results

Apply SINBAR® before weeds emerge or after emergence while weeds are small. Rainfall or overhead irrigation is necessary to move SINBAR® into the weed root zone before weeds become well established. If weeds are present at time of treatment, add a surfactant at 1 to 2 quarts per 100 gallons of spray solution.

TANK MIXES

SINBAR® herbicide can be tank mixed with other products that are registered for use on hybrid poplars and where the labeled method of application and timing of application are the same as for SINBAR®.

SPECIFIC WEED PROBLEMS Kochia and Russian Thistle

For best results, apply SINBAR® in tank mixture with KARMEX® XP herbicide for control of kochia and Russian thistle.

PRECAUTIONS

• Do not apply to trees which are under stress from low fertility, disease, insect damage, severe weather conditions or water saturated soils, as injury may occur. Severe weather stress, disease or insect damage following application may also result in crop injury.

- Do not apply to frozen soil.
- Do not apply through any type of irrigation system.

• Do not plant treated areas to any other crop for 2 years after last application.

• When using SINBAR® herbicide for the first time on a new hybrid line, limit use to a small area to determine selectivity before using on a field scale.

• When using SINBAR® with a glyphosate herbicide, avoid contact with foliage, green stems, trees or other desirable vegetation because severe damage may result.
