LANNATE® L METHOMYL INSECTICIDE
FOR USE ON GRAPES
WEST OF THE ROCKY MOUNTAINS

Du Pont "Lannate" L Methomyl Insecticide is recommended for use on grapes west of the Rocky Mountains for control of omnivorous leaf-roller, grape leaffolder, orange tortrix and salt marsh caterpillar.

HOW TO USE

Apply by ground equipment in sufficient water to obtain thorough coverage. Good coverage is particularly important in the case of insects which directly attack the grape berries.

Omnivorous Leafroller - Apply 4 pints per acre. Make the first application when insects appear in damaging numbers or when leaf folding is observed. Repeat at 5- to 7-day intervals or as needed.

Grape Leaffolder - Apply 4 pints per acre. Make the first application when insects appear in damaging numbers or when leaf rolling is observed. Repeat at 5- to 7-day intervals or as needed.

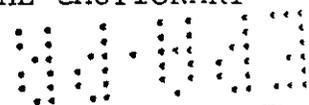

Orange Tortrix - Apply 4 pints per acre. Make the first application when insects appear in damaging numbers in spring growth. Repeat at 5- to 7-day intervals or as needed.

Salt Marsh Caterpillar - Apply 2 to 4 pints per acre. Make the first application when insects appear in damaging numbers. For aerial application, use a minimum of 10 gals. of spray mixture per acre.

Note: Do not treat within 1 day of harvest; do not treat grapes for wine within 14 days of harvest.

IMPORTANT

BEFORE USING "LANNATE" L, READ AND CAREFULLY OBSERVE THE CAUTIONARY

STATEMENTS AND ALL OTHER INFORMATION APPEARING ON THE PRODUCT LABEL.

This bulletin contains new or supplemental instructions for use of this product which may not appear on package label. Follow the instructions carefully.
