KRENITE®

BRUSH CONTROL AGENT

WATER SOLUBLE LIQUID

REGISTRATION CODE 0792-000

PACKAGE SIZE
5 GALLON JUGS

Contains 4 Lbs. Active Ingredient Per Gallon

ACTIVE INGREDIENT	BY WEIGHT
Ammonium salt of fosamine (ethyl hydrogen (aminocarbonyl) phosphonate).....	41.5%
INERT INGREDIENTS.....	58.5%
EPA Reg. No. 352-376	TOTAL 100%
	EPA Est. No. 352-DE-1

KEEP OUT OF REACH OF CHILDREN

CAUTION

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION! MAY IRRITATE EYES, NOSE, THROAT AND SKIN.

Avoid contact with skin, eyes, or clothing. Avoid breathing spray or mist.

STATEMENT OF PRACTICAL TREATMENT

If in eyes: flush with plenty of water.

If on skin: wash with plenty of soap and water.

For medical emergencies involving this product, call toll free 1-800-441-3637.

ACCEPTED
30 JUL 1993

Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. 352-376

ENVIRONMENTAL HAZARDS

Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment washwaters.

IMPORTANT

Do not use on food crops. Do not allow drift or spray mist to contact desirable trees, shrubs, or other plants, as injury may result. Keep from contact with fertilizers, insecticides, fungicides, and seeds.

Thoroughly clean all traces of "Krenite" from application equipment after use. Flush tank, pump, hoses and boom with several changes of water after removing the nozzle tips and screens (clean these parts separately).

GENERAL INFORMATION

Du Pont "Krenite" Brush Control Agent is a water soluble liquid to be diluted with water and applied as a foliar spray for control and/or growth suppression of many woody species. A spray directed to only part of susceptible brush species will provide control of the portion sprayed, resulting in a trimming effect. It is applied to brush during the period from full leaf in spring to first fall coloration.

It is recommended for use on noncropland, including highway rights-of-way, industrial plant sites, railroad rights-of-way, storage areas, utility and pipeline rights-of-way, ditch banks, pine plantations and other similar areas. "Krenite" is non-flammable and non-volatile.

Do not apply to open water (such as lakes, reservoirs, rivers, streams, creeks, salt water bays or estuaries) nor while water is present in fresh water wetlands (such as marshes, swamps, bogs or potholes) nor to salt water marshes within tidal areas nor to areas where the pesticide is likely to move into water. It is permissible to treat ditch banks, seasonally dry flood plains, deltas, marshes, swamps, bogs and transitional areas between upland and lowland sites.

Should treated areas be converted to cropland, do not plant to food crops within 1 year of treatment.

Not registered for sale or use in California or Arizona.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

"Krenite" Brush Control Agent should be used only in accordance with recommendations on this label, or in separate approved supplemental labeling available through your local "Krenite" distributor or Du Pont representative.

Du Pont will not be responsible for losses or damages resulting from use of this product in any manner not specifically recommended by Du Pont. User assumes all risk associated with such non-recommended use.

Do not apply this product through any type of irrigation system.

GENERAL BRUSH CONTROL

Non-Cropland Areas

"Krenite" at the following rates controls or suppresses undesirable brush/herbaceous plant species such as:

1 1/2 to 6 gal "Krenite" per acre †

Bigleaf maple*	Leafy spurge**	Sweetgum
Birch	Loblolly pine	Thimbleberry
Blackberry	Persimmon*	Tuliptree (yellow
Black cherry*	Pin cherry	poplar)*
Blackgum*	Quaking aspen	Vine maple
Black locust	Red alder	Virginia pine
Bracken (fern)	Red maple*	Water oak
Chinese tallow	Red oak	White ash*
Chokecherry*	Salmonberry	White oak
Elm*	Sassafras*	Willow*
Hawthorn*	Sourwood*	
Hickory*	Sumac	

2 to 6 gal "Krenite" per acre †

American elder	Field bindweed**	Tree-of-heaven
Basswood*	Multiflora rose	Wild grape
Eastern cottonwood	Slippery elm	Wild plum
Eastern white pine	Sycamore	Winged elm*

*Partial control and growth suppression.

**Apply "Krenite" after plants begin to bloom.

† Do not apply more than 3 gal. "Krenite" per acre for aerial treatment.

SPRAY PREPARATION

Measure the proper amount of "Krenite" and use agitation to thoroughly mix into the necessary volume of water. Add one of the following surfactants at the rate of 1 qt per 100 gal spray: Du Pont "Sufactant WK", "Renex 30", "Tween 20" or "Triton X-100". To enhance the activity of the "Krenite" treatment, the addition of 1/4% (by volume) of a non-phytotoxic superior-type (60-70 second viscosity) oil as the last ingredient may be desirable in some areas. (Consult local sales personnel). After "Krenite" has been thoroughly mixed in the spray tank, agitation of the spray solution is not required.

SPRAY APPLICATION METHODS

Before applying, properly calibrate spray equipment. For woody plant control, make a single foliar application of the recommended rate of "Krenite" during the period from full leaf in spring to first fall coloration. For control of only a portion of a plant, as in trimming, direct the spray to thoroughly cover only the section of the plant to be controlled. Use the highest recommended rate on stands in which species partially controlled and suppressed are dominant.

For high volume treatment (ground equipment) prepare a spray solution using 1 1/2 to 3 gallons "Krenite" per 100 gallons of water. Do not prepare less than a 1 1/2% solution or exceed 6 gals. "Krenite" per acre. Apply a quantity of spray solution which will thoroughly and uniformly cover the target brush without causing unnecessary run-off. Spray pressure at nozzles should be 100 to 300 psi. Total rate and volume per acre will depend on plant species, height and density of growth and on type of equipment used. On tall dense brush, it is often necessary to spray from both sides to obtain adequate coverage.

For low volume treatment (ground equipment) use airblast equipment such as a "Solo backpack mist blower", prepare a spray solution using 1-1/2 to 3 gallons "Krenite" per 10 gallons of water. Apply a quantity of spray solution using equipment which will assure particle breakup and uniform coverage of the low spray volumes applied, without causing unnecessary run-off. Total rate and volume per acre will depend on plant species, height and density of growth, and on type of equipment used.

For aerial treatment, apply 1 1/2 to 3 gals of "Krenite" per acre using 10 to 40 gallons of water to thoroughly and uniformly cover the target brush without causing unnecessary run-off. Total rate and volume per acre will depend on plant species, height and density of growth, and on type of equipment used. If foaming is encountered, use an anti-foam agent.

Note: Effectiveness may be reduced if, following treatment, rainfall occurs on the same day. Do not cut treated brush until stems are dead, or sprouting may occur.

STORAGE AND DISPOSAL

STORAGE: Store product in original container only. Do not contaminate water, other pesticides, fertilizer, food or feed in storage.

PRODUCT DISPOSAL: Do not contaminate water, food, or feed by storage or disposal. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

CONTAINER DISPOSAL: Triple rinse (or equivalent) the container. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.
