**"VELPAR" HERBICIDE PLUS GRAMOXONE SUPER¹
FOR WEED CONTROL IN ALFALFA IN THE STATES OF
IDAHO, OREGON, UTAH AND WASHINGTON**

DIRECTIONS FOR USE

**is a violation of federal law to use this product
in a manner inconsistent with its labeling**

Du Pont "Velpar" Herbicide is recommended for use as a tank mix with Gramoxone Super for weed control in alfalfa in the states of Idaho, Oregon, Utah and Washington.

HOW TO USE

For control of chickweed, downy brome (cheatgrass) and tansy mustard, apply 1/2 to 1 1/2 lbs "Velpar" and 1.5 to 2.5 pints of Gramoxone Super per acre. *#10182-103 accepted 7/13/87*

Apply the tank mix in 10 gpa by air or 20 gpa by ground; add "Ortho" X-77 Spreader at 1 to 2 pints per 100 gallons of spray solution. Use the lower dosage rates on loamy sand or sandy loam soils.

Apply once to established stands of alfalfa during the dormant season for alfalfa; do not apply to regrowth that is more than 2" tall. Do not apply following cuttings during the growing season. Do not apply to alfalfa during the first season after seeding. Stress which may be caused in part by low fertility, disease, insects, winter kill, overcutting, drought, or frost may increase the chances of crop injury. Temporary chlorosis may occur on alfalfa regrowth. Do not apply to alfalfa grown for seed production.

NOTE: Do not use on gravelly or rocky soils, exposed subsoils, hardpan, sand, poorly drained or alkali soils. Crop injury, including mortality, may result in fields having restricted root growth due to non-uniform soil profiles such as gravel bases, hardpans, and clay lenses. Do not apply through any type of irrigation system.
