VELPAR® L HERBICIDE
FOR CONTROL OF UNDESIRABLE WOODY PLANTS IN RANGELAND

DIRECTIONS FOR USE

It is a violation of federal law to use this product
in a manner inconsistent with its labeling.

GENERAL INFORMATION

Du Pont Velpar® L Herbicide is recommended for use on rangeland for control of undesirable woody plants such as elm, hackberry, mesquite, myrtle, oaks (blackjack, post, sand shinnery, water and white), osage-orange, red cedar, tallow, whitebrush and willow. It is a liquid product to be applied undiluted with an exact delivery handgun applicator as an individual stem treatment. Sufficient rainfall is required to move the herbicide into the root zone of the woody plants where it is absorbed during periods of active plant growth. The effect of treatment will vary with the amount applied, soil type, rainfall, timing and uniformity of application and other conditions.

HOW TO USE

Make application just before or during the period of active growth of brush species to be controlled (late winter to mid-spring). Apply "Velpar" L undiluted with an exact delivery handgun applicator. This equipment delivers a thin stream of predetermined volume when triggered. Apply at the rate of 2 to 4 milliliters for each 1" of stem diameter at breast height of trees to be controlled, but not to exceed 1/3 gallon "Velpar" L per acre per season. Direct the treatment to the soil within 3' of the root collar. When treating large stems, and when more than one delivery of "Velpar" L is needed per stem, make application on opposite sides of the stem. Do not treat more than 300 one inch stem equivalents (approximately 70 brush plants) per acre per season.

NOTE: Do not use on marshy or poorly drained sites nor on soils classified as clays. Do not cut hay from treated grasses.

IMPORTANT

BEFORE USING "VELPAR" L, READ AND CAREFULLY OBSERVE THE CAUTIONARY STATEMENTS AND ALL OTHER INFORMATION APPEARING ON THE PRODUCT LABEL.

This bulletin contains new or supplemental instructions for use of this product which may not appear on the package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.
