VELPAR® RP HERBICIDE
FOR CONTROL OF UNDESIRABLE WOODY PLANTS IN RANGELAND AND PASTURES

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

GENERAL INFORMATION

Du Pont Velpar® RP Herbicide is recommended for use on rangeland and pastures for control of undesirable woody plants such as elm, hackberry, huisache, juniper spp. (redberry, eastern red cedar), mesquite, multiflora rose, myrtle, oaks, osage orange (bois d'arc), tallow, whitebrush and willow. It is a liquid product to be applied undiluted with an exact delivery handgun applicator as an individual stem treatment, it is non-corrosive to equipment.

On woody plants, symptoms usually appear within 3 weeks after sufficient rainfall has carried the herbicide into the root zone where it is absorbed during periods of active plant growth. Defoliation and subsequent refoliation may occur, but susceptible plants are killed. The effect of treatment will vary with the amount applied, soil type, rainfall, timing and uniformity of application and other conditions.

HOW TO USE

Make application just before or during the period of active growth of brush species to be controlled. Apply "Velpar" RP undiluted with an exact delivery handgun applicator. This equipment delivers a thin stream of predetermined volume when triggered. Direct the application to the soil within 3' of the root collar at the rate of 2 to 4 milliliters for each 1" of stem diameter of brush to be controlled, but not to exceed 1/3 gallon of "Velpar" RP per acre per season. When treating large stems, and when more than one shot of "Velpar" RP is needed per stem, make applications on opposite sides of the stem. Do not treat more than 300 one-inch stem equivalents (approximately 70 brush plants) per acre per season.

NOTE: For effective brush control and prevention of damage to desirable vegetation; do not apply to brush standing in water; do not use water from treated ditches for irrigation; do not use where desirable trees or shrubs are immediately adjacent to the treated area.

Do not use on marshy or poorly drained sites nor on soils classified as clays. Do not cut hay from treated grasses.

IMPORTANT

BEFORE USING "VELPAR" RP, READ AND CAREFULLY OBSERVE THE CAUTIONARY STATEMENTS AND ALL OTHER INFORMATION APPEARING ON THE PRODUCT LABEL.

This bulletin contains new or supplemental instructions for use of this product which may not appear on the package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.
