AERIAL APPLICATION ON UTILITY RIGHTS-OF-WAY,
MILITARY INSTALLATIONS RANGELAND AND PASTURES WESTERN US

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with the labeling.

DuPont "Escort" Herbicide is recommended for control of noxious and troublesome species of weeds and brush on utility and pipeline rights-of-way, military installations, rangeland and pastures in the western US by aerial (helicopter and fixed wing) application.

Applications may be made in the states of Arizona, California, Colorado, Idaho, Montana, Nebraska, North Dakota, Nevada, New Mexico, Oklahoma, Oregon, South Dakota, Texas, Utah, Washington and Wyoming.

Refer to the package label or additional supplemental labeling for species of weeds and brush controlled and the appropriate use rates.

In addition to the species listed on the package label, "Escort" is recommended for the control of seaside arrowgrass when applied at 0.5 oz/acre. The application should be applied at the late bloom stage of development following hay harvesting.

When used as directed forage grasses may be cut for hay, fodder or green forage and fed to livestock 3 days after treatment at rates up to 3 1/3 ounces per acre. At rates of 1 2/3 ounces per acre and less, there is no grazing restriction.

HOW TO USE

Apply with helicopter or fixed wing aircraft fitted with application equipment designed to deliver droplets of uniform size and to prevent drift. Mix tanks or nurse tanks should be equipped with an agitation system capable of keeping the "Escort" thoroughly mixed during the application. If the spray preparation is left standing, thoroughly agitate before using.

The use of a non-ionic surfactant of at least 80% active ingredient at a minimum rate of 1 qt/100 gal. of spray solution is necessary for acceptable performance. Apply the finished solution at rates between 5 and 25 gal/acre.

Helicopters should be fitted with application equipment designed to deliver droplets of uniform size and to prevent drifts such as MIROFOIL or THRU-VALVE boom. Fixed wing aircraft should be fitted with solid stream nozzles oriented straight back and apply a minimum of 5 gallons of solution per acre. Use the lower volumes when applications are made with fixed wing aircraft or when the target vegetation is small or sparse. Use the higher volumes when applications are made with a helicopter (10 to 25 gal/acre) or when the target vegetation is tall, dense or forms multiple canopies (strata) of foliage. Thorough coverage of the target plant's foliage is necessary to obtain adequate control.

For broader spectrum control, "Escort" may be tank mixed with other herbicides labeled for tank mix combination and aerial application on the specific use sites.

Refer to the "Escort" package label for a complete listing of registered tank mixes. Refer to the respective package labels for appropriate use rates and use sites. Read and follow the most restrictive cautionary statements and restrictions on the "Escort" and companion product's package label.

Refer to the "Escort" package label for the appropriate procedure for sprayer clean-out. Once "Escort" has been applied through a sprayer do not use the sprayer on use sites or crops other than those listed on the package label.

CAUTION

Avoid drift. Do not allow spray from either ground or aerial equipment to drift onto adjacent crops or land, as even small amounts can injure susceptible crops or plants. Do everything possible to avoid spray drift.

Do not make aerial applications when wind conditions favor drift from the target area. Spray drift can occur at wind speeds less than 10 MPH. If sensitive crops or plants are downwind, extreme caution must be used even in relatively low wind conditions. Do not spray when winds are gusty. Do not apply under inversion conditions. Extreme caution must be used when high temperatures, drought and low humidity increase the possibility of harmful spray drift.

Do not apply by air within 200 feet of any homestead, agricultural land or other desirable plantings or any body of water.

IMPORTANT

BEFORE USING "ESCORT", READ AND CAREFULLY NOTE THE CAUTIONARY STATEMENTS AND ALL OTHER INFORMATION APPEARING ON THE PRODUCT CONTAINER LABELS.

This bulletin contains new or supplemental instructions for use of these products in combination which does not appear on the package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.

DIRECTIONS FOR USE

BEST AVAILABLE COPY

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

DuPont "Escort" Herbicide is recommended for control of certain species of weeds and brush on utility and pipeline rights-of-way in the eastern US by aerial (helicopter only) application. Applications may be made by helicopter in the states of Minnesota, Iowa, Missouri, Arkansas, Louisiana and all states which do not prohibit aerial application located to the east of these states.

Refer to the package label for species of weeds and brush controlled and the appropriate application rates.

When used as directed there is no grazing restriction for use rates of 1 2/3 ounces per acre and less. At rates up to 3 1/3 ounces per acre forage grasses may be cut for hay, fodder or green forage and fed to livestock 3 days after treatment.

HOW TO USE

Apply with helicopters fitted with application equipment designed to deliver droplets of uniform size and to prevent drift such as a MICROFOIL or THRU-VALVE boom. Mix tanks or nurse tanks should be equipped with an agitation system capable of keeping the "Escort" thoroughly mixed during the application. If the spray preparation is left standing, thoroughly agitate before using.

The use of a non-ionic surfactant of at least 80% active ingredient at a minimum rate of 1 qt/100 gal. of spray solution is necessary for acceptable performance. Apply the finished solution at rates between 10 and 25 gal./acre. The lower application volumes may be used where brush and weeds are small or scattered. Use the higher application volumes on dense stands, where very large (tall) stems occur or where multiple canopies (strata) of foliage occur.

For broader spectrum control, "Escort" may be tank mixed with other herbicides labeled for aerial application on utility or pipeline rights-of-way. Refer to the "Escort" package label for a complete listing of registered tank mixes. Refer to respective package labels for appropriate use rates. Read and follow the most restrictive cautionary statements and restrictions on the "Escort" and companion product's package labels.

Refer to the "Escort" package label for the appropriate procedure for sprayer clean-out. Once "Escort" has been applied through a sprayer do not use the sprayer on use sites other than those listed on the package label.

CAUTION

Avoid drift. Do not allow spray from either ground or aerial equipment to drift onto adjacent crops or land, as even small amounts can injure susceptible crops or plants. Do everything possible to avoid spray drift.

Do not make aerial applications when wind conditions favor drift from the target area. Spray drift can occur at wind speed less than 10 MPH. If sensitive crops or plants are downwind, extreme caution must be used even in relatively low wind conditions. Do not spray when winds are gusty. Do not apply under inversion conditions. Extreme caution must be used when high temperatures, drought and low humidity increase the possibility of harmful spray drift.

Do not apply by air within 200 feet of any homestead, agricultural land or other desirable plantings or any body of water.
