Assure[®] Herbicide for
Noncrop Usage

Directions For Use

It is a violation of federal law to use this product
in a manner inconsistent with its labeling.

De Pont Assure[®] Herbicide is recommended for postemergence usage to control certain grasses on noncrop sites such as fence rows, roadsides, equipment storage areas, and other similar areas.

How to Use

Apply 1 1/2 to 2 pints Assure[®] per acre to actively growing plants as follows:

Crackgrass - Apply when plants are 6 to 10 inches tall.
If regrowth occurs, make a second application.

Wild Oats - Apply when plants are 2 to 6 inches tall.

Additional postemergence treatments are required to control new emerging plants.

Application and Mixing

Use a spray volume of no less than 10 nor more than 40 gallons water per acre.

Mix the selected rate of Assure[®] (1 1/2 to 2 pints/acre) in the per acre spray volume chosen (10 - 40 gal); add a nonphytotoxic petroleum oil concentrate at 1% volume/volume (1 quart per 100 gallons water) to the spray mix. Do not use vegetable oils.

DP-70-88

Note: Do not apply spray drift on to adjacent crops as injury to plants other than soybeans will likely occur. When spraying close to adjacent crops or plants, do everything possible to reduce the occurrence of off-target spray movement such as:

- Increase spray volume.
- Use lower sprayer pressure (but not less than 20 psi).
- Add an appropriate drift control agent.
- Stop spraying if wind speed becomes excessive.

Do not graze or feed forage or hay from treated areas to livestock.

IMPORTANT

BEFORE USING "ASSJKE", READ AND CAREFULLY OBSERVE THE CAUTIONARY STATEMENTS AND ALL OTHER INFORMATION APPEARING ON THE PRODUCT LABEL.

This bulletin contains new or supplemental instructions for use of this product which may not appear on the package label. Follow instructions carefully.

This labeling must be in the possession of the user at the time of application.
