

DRAFT, NOT APPROVED

"GEMINI" HERBICIDE
EPA REG.NO. 352-443

SUPPLEMENTAL LABELING
"GEMINI" HERBICIDE
REDUCED RATE FOLLOWED BY "CLASSIC" HERBICIDE
FOR BROADLEAF WEED CONTROL IN SOYBEANS

Du Pont "Gemini" Herbicide is recommended preplant incorporated or preemergence at reduced rates followed by "Classic" Herbicide postemergence for broadleaf weed control in soybeans. This treatment will control those broadleaf weeds listed on the "Gemini" and "Classic" Herbicide product labels.

DIRECTIONS FOR USE

Apply "Gemini" preplant incorporated or preemergence at 8-10 ounces product per acre to any soil texture with 1/2 to 3% organic matter as directed on the product label. Follow the "Gemini" preplant incorporated or preemergence reduced rate with a postemergence application of "Classic" Herbicide at its labeled rate when weeds are small and actively growing. (Usually 14-28 days after preplant incorporated or preemergence application of "Gemini" reduced rate.)

For grass weed control "Gemini" can be tank mixed with Dual[2], Lasso[3], Surflan[4], Treflan[4] or Surflan[4]. Consult labels for rates and use instructions of these products.

This bulletin contains new or supplemental information for use of these products which does not appear on the product label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.
