Products**

"..... A Growing Partnership With Nature"

**SUPPLEMENTAL LABELING**

**LONDAX® HERBICIDE  
PLUS PERMIT<sup>1</sup> HERBICIDE  
FOR PREFLOOD  
WEED CONTROL IN RICE**

**LONDAX® HERBICIDE**

EPA Reg. No. 352-506

**LONDAX AND PERMIT HERBICIDES FOR PREFLOOD  
CONTROL OF SEDGE AND BROADLEAF WEEDS IN RICE  
IN THE STATES OF AR, LA, MS, MO AND TX**

**DIRECTIONS FOR USE**

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

A tankmix of 0.75 to 1.0 oz/Acre of LONDAX® herbicide plus 0.125 to 0.25 oz/Acre of PERMIT<sup>1</sup> herbicide may be applied for improved control of broadleaf weeds and sedges in rice using preflood application methods. Observe all applicable directions, restrictions (including water holding requirements and the use of spray adjuvants) and precautions on the PERMIT herbicide label. Follow the most restrictive directions from either the LONDAX® label or the tank mix partner.

Do not exceed 1.23 oz LONDAX® herbicide per season.

For best results, the permanent flood should be established as soon as possible after application. Establishment of the permanent flood will increase herbicide activity as well as reduce reinfestation from newly germinating weeds.

When tankmixing LONDAX® and PERMIT herbicides the use of a nonionic surfactant (minimum 80% active ingredient) at 0.25% v/v (1 qt per 100 gal), or a crop oil concentrate at 1% v/v (1 gal per 100 gal) is recommended.

**WEEDS CONTROLLED**

Common Name	Scientific Name	Weed Height (inches)
Rice Flatsedge	Cyperus iria	3-10
Yellow Nutsedge	Cyperus esculentus	3-10
Hemp Sesbania (Coffeebean)	Sesbania exaltata	2-6
Northern Jointvetch (Curly indigo)	Aeschynomene virginica	2-4
Entireleaf Morningglory	Ipomea hederacea	2-4
Ivyleaf Morningglory	Ipomea hederacea	2-4
Pitted Morningglory	Ipomea lacunosa	2-4
Palmleaf Morningglory	Ipomea wrightii	2-4
Dayflower	Commelina communis	1-3
Redstem	Ammannia auriculata	2-6

The tankmix of LONDAX® and PERMIT may also be applied in combination with labeled propanil-containing rice herbicides for control of additional sedge, broadleaf, and grass weeds in rice.

Refer to the LONDAX® PERMIT and propanil-containing herbicide labels for additional use directions, weeds controlled, restrictions and precautions.

**APPLICATION**

Apply LONDAX® (0.75 to 1.0 oz per acre) in combination with PERMIT (0.125 to 0.25 oz per acre) for control of many broadleaf and sedge weeds in rice. A minimum spray volume of 10 gallons of water per acre should be used to insure thorough coverage of the weeds. Weeds should be actively growing at the time of application.

**WATER MANAGEMENT**

For optimum weed control, the permanent flood should be established as soon as possible after the last LONDAX® + PERMIT application. If flushing is necessary prior to establishment of the permanent flood, LONDAX® - PERMIT applications should be made after the flush but prior to the establishment of the permanent flood.

Loss of the permanent flood following applications of LONDAX® + PERMIT may result in poor performance due to regrowth of treated plants or reinfestation by newly germinated weeds. Rainfall significant for overflow, water loss due to levee seepage, levee breach, or introduction of new water soon after treatment could reduce product performance.

**IMPORTANT**

**BEFORE USING LONDAX®, READ AND FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS AND PRECAUTIONS ON THE EPA-REGISTERED LABEL.**

This bulletin contains new or supplemental instructions for use of this product which do not appear on the EPA-registered package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.

PERMIT is a registered trademark of Monsanto Co.
