BENLATE® SP FUNGICIDE FOR THE SUPPRESSION OF ANTHRACNOSE ON CITRUS

BENLATE® SP FUNGICIDE

(EPA REG. NO. 352-564)

FOR THE SUPPRESSION OF ANTHRACNOSE ON CITRUS

DIRECTIONS FOR USE

Apply DuPont "Benlate SP" Fungicide at 1 1/2 - 2 lbs per acre. Complete coverage of the entire tree is necessary for maximum suppression of anthracnose. Application can be made by ground using sufficient water to obtain thorough coverage or by air (using fixed wing aircraft or helicopter). NOTE: In California, only ground applications permitted.

For air applications apply between 15 and 30 gallons of final spray per acre. Agitation is required during mixing and spraying. Fly every tree row middle in alternate directions. Do not fly a race track pattern. Do not fly an across tree row pattern.

At least 2 applications should be made for optimum results.

Make the first application at early bloom when significant anthracnose infestations exist and weather conditions are favorable for further disease development. The second application should be made 7 - 14 days after depending on disease and weather conditions. Under severe disease pressure and/or warm, wet weather conditions, the interval between the first and second application should be shorter (7 days). If disease and weather conditions continue to promote further spread of anthracnose, additional application may be necessary.

Do not exceed 6 lbs of "Benlate SP" per acre per season. Do not apply within 2 days of harvest.

"Benlate SP" provides suppression of anthracnose, complete suppression is not obtainable due to the nature of the disease. The level of suppression obtained will be influenced by disease severity, weather conditions, and spray coverage.

IMPORTANT

BEFORE USING "BENLATE SP", READ AND FOLLOW ALL APPLICABLE DIRECTIONS, RESTRICTIONS, AND PRECAUTIONS ON THE EPA REGISTERED LABEL.

This bulletin contains new or supplemental instructions for use of this product which do not appear on the EPA registered package label. Follow the instructions carefully.

This labeling must be in the possession of the user at the time of pesticide application.
