BASIS® GOLD™ performs best when applied to small, actively growing grasses, often times 30-45 days after corn planting. Apply BASIS® GOLD™ (with or without a labeled broadleaf herbicide) at a rate of 14 ounces per acre. Consult the BASIS® GOLD™ label for a complete listing of grasses controlled and the labeled sizes.

Do not apply less than 14 ounces of BASIS® GOLD™ per acre.

Always add a crop oil concentrate or methylated seed oil to BASIS® GOLD™ at a rate of 1 gallon per 100 gallons of spray solution (1% v.v). In addition, add an ammonium nitrogen fertilizer such as 28-0-0 to the spray tank. See the BASIS® GOLD™ label for additional information on ammonium fertilizer types and rates.

IMPORTANT PRECAUTIONS

Refer to the BASIS® GOLD™ label for mixing and other use instructions.

An activating rainfall (>1/2") shortly after the application of the preemergence herbicide BASIS® GOLD™ is necessary for activation and maximum residual activity.

Refer to the selected preemergence herbicide label as well as the BASIS® GOLD™ label for additional use directions, restrictions, rotational crop intervals and precautions. The most restrictive provision on either label shall apply.

Do not apply BASIS® GOLD™ through any type of irrigation system.
