DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

GENERAL INFORMATION

STEWARD® EC is an emulsifiable concentrate that can be applied as a foliar spray to control many important insect pests. STEWARD® EC is diluted with water for application.

APPLICATION INFORMATION, RATES AND TIMING

DuPont™ STEWARD® EC insecticide is recommended for the control of speckled green fruitworm (*Orthosia hibisci*) in hybrid poplar plantations. STEWARD® EC works best when insects are actively feeding on treated foliage. Treat at first sign of economic damage.

Apply STEWARD® EC at 8 fluid ounces per acre as a foliar spray by air or ground equipment using sufficient water to obtain thorough coverage. A second application can be made as needed to control speckled green fruitworm populations, but the second application must be at least 10 days after the first application.

Reentry into treated areas is prohibited for 12 hours unless the personal protective clothing and equipment specified on the STEWARD® EC product label for early reentry are worn.

Do not apply more than 16 fluid ounces (0.156 lb. a.i.) per crop per acre per year.

Do not apply within 30 days of harvest.

IMPORTANT

Before using STEWARD® EC, read and follow all applicable directions; restrictions; and precautions on the EPA-registered label.

This bulletin contains new or supplemental instructions for use of these products in combination which does not appear on the package label. Follow the instructions carefully.
