

31

Specific directions for pocket gophers. Burrowing pocket gophers (*Thomomys* spp. and *Geomys* spp.) throw out low, fan shaped mounds on either side of their underground tunnel. These lateral tunnels coming to the surface are on the flat side of the fan and are plugged with soil. With a long-handled spoon carefully remove the plug. Insert a teaspoonful amount as far down as possible. Reclose opening, being careful not to cover bait with soil.

DISPOSAL: Do not reuse empty container. Wrap container and put in trash collection.

**PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS**

CAUTION: May be fatal if swallowed or inhaled. Avoid contact with skin, eyes, or clothing. Avoid breathing dust. Wash hands after use. Avoid contamination of feed or food stuffs. Avoid contact with acids.

STATEMENT OF PRACTICAL TREATMENT

Swallowed. Drink 1 or 2 glasses of water and induce vomiting by touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious person. Get medical attention.

ENVIRONMENTAL HAZARDS

This product is toxic to birds and other wildlife. Do not allow bait to be exposed on soil surface. Do not apply where runoff is likely to occur. Keep out of any body of water.

Pleasant Valley, N.Y. 12569

NHT MOLE-NOTS

**SPECIAL
KILLS MOLES
& GOPHERS**

Active Ingredient:	
Zinc Phosphide	2.0%
Inert Ingredients	98.0%
Total	100.0%

CAUTION: Keep Out Of Reach Of Children. See Side Panel for antidote statement and additional precautionary statements.

Net Weight 10 oz.

Item No. 220 (4 oz.)

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Use Restrictions. For use against moles and pocket gophers in lawns, golf courses, and other non-crop areas. Do not apply in gardens and areas where food or feed may be contaminated. Only apply the bait underground. Collect and bury all dead animals found above the ground.

Specific directions for moles. The presence of moles may be indicated by a network of surface ridges in the turf, by a series of conical mounds of earth pushed up from deep burrows, or by damage to bulbs.

Surface Ridges. Prior to treatment, determine which burrows are active according to one of the following two methods. Either press down a small section of the tunnel or remove a one inch section of the tunnel's roof. Mark these sections and recheck in 24 hours. The burrow is considered active if the flattened runway has been raised up or if the roof has been repaired. Only treat active burrows. Carefully punch a hole in the top of active tunnels, drop in a teaspoonful and carefully close the hole with sod or soil. Do not collapse the runway again or allow loose soil to cover the bait. After a few days check to see if the burrows are still active according to one of the two methods described above. If so, repeat treatment.

Conical Mounds. Remove center plug from the conical mounds with the aid of a long-handled spoon and drop a teaspoonful amount of MOLE-NOTS Special into the underground tunnel. Close opening with rock or sod. Do not allow loose dirt to cover bait.

ACCEPTED
MAY 14 1981
Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. 358-165
