LEAVES A WAX FILM OF  
POWERFUL 2,4-D AMINE WEED  
KILLER... for the control of broad-  
leaf weeds in lawns and turf.

plantain, shepherds-purse, spotted spurge, cat's  
ear, sp. leaf, English daisies, wintercress, wild  
onion & other turf weeds susceptible to 2,4-D.  
**DIRECTIONS: When to Apply**—Apply any time in  
spring or fall when air temperature is between  
70 and 80 degrees and when weeds are young  
and actively growing. Under certain weather  
conditions some tip scorch of grass may occur, es-  
pecially with St. Augustine, Buffalo and Bent; this  
is only temporary and will be removed at the next  
cutting. One application is normally sufficient,  
however, a retreatment may be required for

have been missed the first time over.  
**How to Apply: By Hand**—Tie drag tape through  
holes at each end of bar and slowly drag slowly  
across the lawn. Best applied when lawns have  
been newly cut. Do not mow again for some days  
after application. **By Mowing Machine**—Attach  
drag tapes to rear of mower, adjusting them to  
suitable length. Reduce speed of power mower  
to give easy and smooth application. Area of lawn  
cut by mower will also mark treated portion.  
To insure that wax on each side is worn down  
evenly, turn bar over from time to time.  
Do Not Apply to Dichondra, Carpet or Crabgrass Lawns.

clothing. If any irritation follows contact, avoid  
further contact and consult physician.  
**WARNING:** Do not let the bar come in contact  
with vegetables, flowers, fruit trees, ornamen-  
tals, or other desirable plants sensitive to 2,4-D  
formulations. After handling bar, wash hands  
thoroughly to prevent possible contamination by  
touching susceptible plants. Do not store near  
plants, fertilizers, seeds, insecticides or fungi-  
cides. When storing, it is important to re-wrap  
unused portion of the bar in the plastic bag  
originally supplied, and replace in the carton.

THE WONDERFUL

**weedez**

Printed in U.S.A. • Copyright Rhodia, Inc., Chipman Division

USDA Reg. No.

**weedez WONDER BAR... The Sure, Easy Way to Control Lawn Weeds**

**ADVANTAGES**

You can use the Weedez Bar right up to the edges of flower gardens, shrubbery, borders and vegetable gardens because there is no drift or vapors to harm valuable plants. No equipment is needed; measuring, mixing and spraying are eliminated. It covers about 1/2 acre and costs about 25¢ per 1000 sq. ft.

**HOW IT WORKS**

Only a small amount of powerful 2,4-D weed killer is required to kill the weeds. As you pull or drag the wax bar across your lawn, it deposits on the weeds and grass a thin film of wax containing 2,4-D. This kills the weeds, but does not harm the grass. The wax holds the 2,4-D on the weeds and is not affected by wind or rain.

**WHEN TO APPLY**

Use in the spring or fall when weeds are young and growing rapidly. Best results are obtained on sunny days at temperatures between 70° and 80°, when weeds are young and growing rapidly. Do not apply during unusually dry weather or on cold, cloudy days when weeds are less active.

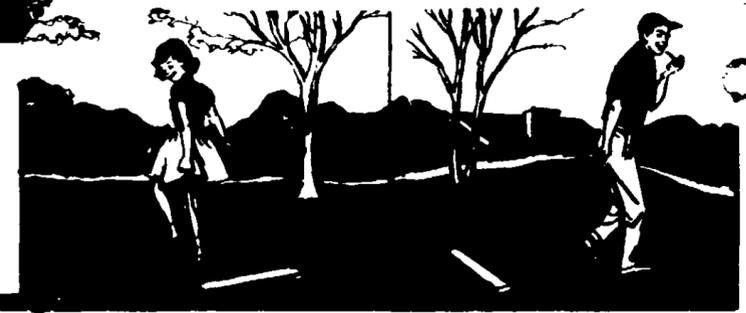

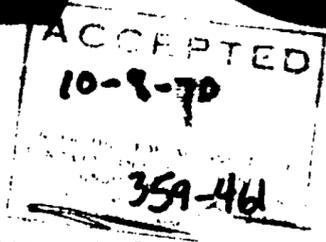

**HOW MANY APPLICATIONS**

One application, applied in two directions, is recommended. Time the application when dandelions and other weeds are at least as high as the grass. A second application 10 days later, applied at right angles to the first application, will control weeds missed the first time and give a second dose to more resistant or hard-to-kill weeds.

## Sure, Easy Way to Control Lawn Weeds... Costs About 25c per 1000 Sq. Ft.

### WHEN TO APPLY

Apply in the spring or fall when weeds are young and growing rapidly. Best results are obtained on sunny days at temperatures between 70° and 80°, when weeds are young and growing rapidly. Do not apply during unusually dry weather or on cold, cloudy days when weeds are less active.

### HOW MANY APPLICATIONS

One application, applied in two directions, is recommended. Time the application when dandelions and other weeds are at least as high as the grass. A second application 10 days later, applied at right angles to the first application, will control weeds missed the first time and give a second dose to more resistant or hard-to-kill weeds.

### WEEDS AFFECTED

Usually one application will control visible dandelion, wintercress, plantain, shepherds-purse and spotted spurge. The second application will control hard-to-kill weeds such as English daisies, self-heal, heal-all and cat's ear. The Weedez Bar has little or no effect on white clover, chickweed and knotweed.

### WILD ONIONS AND GARLIC

Apply in two directions at right angles. Several treatments may be required because many of the underground bulblets remain dormant each season and may remain unaffected. The application of 2,4-D in the form of wax appears to be more effective on wild onions and garlic than when applied in a spray.

### WHEN TO APPLY

Apply to the ground where weeds are growing in the early spring. Best results are obtained when the temperature is between 70° and 80° when weeds are young and growing rapidly. Do not apply during periods of heavy rain or when the ground is dry.

### HOW MANY APPLICATIONS

One application, applied in two directions, is recommended. Time the application when dandelions and other weeds are at least as high as the grass. A second application 10 days later, applied at right angles to the first application, will control weeds missed the first time and give a second dose to those resistant or hard to kill weeds.

### WEEDS AFFECTED

Usually one application will control annual and biennial weeds, such as plantain, shepherd's purse, and spotted spurge. Two applications will control hard to kill weeds, such as English dandelion, self-heal, thistle, and cat's paw. The Weedez Bar is little more effective against perennial weeds and knotweed.

### WILD ONIONS AND GARLIC

Apply in two directions at right angles. Several treatments may be required because many of the underground bulblets remain dormant each season and may remain unaffected. The application of 2,4-D in the form of wax appears to be more effective on wild onions and garlic than when applied in a spray.
