11. The following table shows the number of people who attended the 2000 Summer Olympics in Sydney, Australia, and the 2004 Summer Olympics in Athens, Greece. The number of people who attended the 2000 Summer Olympics in Sydney, Australia, is 14,511,000. The number of people who attended the 2004 Summer Olympics in Athens, Greece, is 10,265,000. Write the number of people who attended the 2000 Summer Olympics in Sydney, Australia, and the 2004 Summer Olympics in Athens, Greece, in standard form.

*less susceptible weed

IMPORTANT: The word "conjunction" refers to two words joined by a conjunction.

WHEN TO APPLY: Mifeprex should be taken as soon as possible after the first day of your period. It is most effective when taken within 72 hours of the first day of your period. It is also effective when taken up to 14 days after the first day of your period. The effectiveness of Mifeprex decreases as the time between the first day of your period and the time you take the medicine increases. If you are not sure when the first day of your period was, you should take Mifeprex as soon as you can. If you are not sure when the first day of your period was, you should take Mifeprex as soon as you can. If you are not sure when the first day of your period was, you should take Mifeprex as soon as you can.

AMOUNT TO USE: _____

HOW TO APPLY: All applications must be received by the Office of the Registrar on or before the deadline date.

FOR GROUND APPLICATION EQUIPMENT: Apply in a minimum of 1.25 gallons of fluid spray per acre. Use a higher gallonage if necessary to get good coverage. Nozzle pressure should be at least 30 p.s.i.

FOR AERIAL APPLICATION: Apply in a minimum of 10 gallons of water per acre. The plane should fly at a height above the crop to ensure good coverage of weeds. Width of swath to be sprayed must exceed length of spray boom.

Apply the patch of Bio-Cell 4 toothpaste

Use 2 points of BUCEDL per acre of weeds in 1/2 and the 3/4-4 leaf stage but less than 6 inches in height and before flower formation. Weeds that form a thick stand should be treated when these conditions are met. If the weeds are less than 1/2 inches tall, use

This treatment may be used on seedling grasses, such as Mexican Bunchgrass, Delta or Common Kentucky Bluegrass, Pennwink, Chewings Bluestem or Alfalfa, and Orchard grass. Highest yields are obtained from pure seedling grasses, but may be used on grasses planted for seed and production of forage grasses, except for seed production in both years.

For broadcast treatment of small weeds: Apply 4 quarts of BUR-TRU with 1 quart of surfactant and pour in 100 quarts of water from a backpack. Then spray over the weeds. Make sure spray is heavy enough to wet the tops of all plants. Use adequate spray pressure to get the full beat of spray.

For spot treatment of scattered infestations or large weeds along fencerows, in vacant lots, and on industrial sites: Mix 1 quart of EHO EHO with 3/4 quart of household kerosene. Spray or dust out over the infested area. Repeat applications as needed. The weed killer will kill many types of weeds, but it is not effective on trees, shrubs, or vines.

Второе из них – это то, что в настоящее время в России не существует единого законодательства, регулирующего деятельность органов государственной власти и местного самоуправления в области охраны окружающей среды.

[illegible]

Figure 1 shows the effect of the number of iterations on the error of the solution. The error decreases rapidly as the number of iterations increases, and the solution converges to the exact solution within 10 iterations.

It is important to note that the word *pro* is not a marker of the future, as it is in English. It is a marker of the infinitive, which is the form of the verb that is used to express a purpose or a goal. In this case, the infinitive is used to express the purpose of the action, which is to "be a good person".

Caution: Do not use this product if you are pregnant or nursing.

$$P_{\text{max}} = \frac{\sum_{i=1}^n p_i}{n}, \quad P_{\text{min}} = \frac{\sum_{i=1}^n p_i}{n}, \quad P_{\text{avg}} = \frac{\sum_{i=1}^n p_i}{n}, \quad P_{\text{std}} = \sqrt{\frac{\sum_{i=1}^n p_i^2}{n} - P_{\text{avg}}^2}$$
