

RHODIA 2,4-D BUTYL ESTER

ACTIVE INGREDIENT	
Isobutyl ester of 2,4-dichlorophenoxy-	
acetic acid*	94.0 %
INERT INGREDIENTS	6.0%

STATEMENT OF PRACTICAL TREATMENT

It's swallowed	It's a small, green, pea-sized, sticky, translucent mass that is usually found in the mouth, throat, or nose. It is often found in the mouth, throat, or nose.
It's on Skin	It's a small, green, pea-sized, sticky, translucent mass that is usually found in the mouth, throat, or nose. It is often found in the mouth, throat, or nose.
It's in Eyes	It's a small, green, pea-sized, sticky, translucent mass that is usually found in the mouth, throat, or nose. It is often found in the mouth, throat, or nose.

These results suggest that the use of the *in vitro* model system for the study of the effects of the chemical agents on the DNA damage in the cells of the human lymphocytes is a useful tool for the study of the effects of the chemical agents on the DNA damage in the cells of the human lymphocytes.

1. The SPDES permit is issued by the New York State Department of Environmental Conservation (NYSDEC) and is required for all discharges of pollutants into the state's waters.

the water level in the water body by storage or draining of sediment. It is also possible to use the water body itself as a sediment trap by creating a pond or a depression in the bottom of the water body. The pond or depression should be located in a place where the sediment is likely to settle. The pond or depression should be deep enough to hold the sediment for a long time. The pond or depression should be surrounded by a low wall or a fence to prevent the sediment from being washed away by the water. The pond or depression should be maintained regularly to prevent the sediment from being washed away by the water. The pond or depression should be located in a place where the sediment is likely to settle. The pond or depression should be deep enough to hold the sediment for a long time. The pond or depression should be surrounded by a low wall or a fence to prevent the sediment from being washed away by the water. The pond or depression should be maintained regularly to prevent the sediment from being washed away by the water.

For the first two studies, ΔA is positive, i.e., the measured ΔA is consistent with the expected for a positive transformation. In the third study, however, the measured ΔA is negative, and the physical properties of the different chemical structures are not consistent with the expected ΔA for a positive transformation.

the seller's obligation to provide the buyer with the right to return the goods if the buyer is not satisfied with the goods. The seller's obligation to provide the buyer with the right to return the goods is a key element of the seller's obligation to provide the buyer with the right to return the goods. The seller's obligation to provide the buyer with the right to return the goods is a key element of the seller's obligation to provide the buyer with the right to return the goods.
