

DIRECTIONS

MOLES — First determine what sections of the network of ridged, subsurface runways are repeatedly used by the mole by stepping on and crushing in the tunnel at numerous points about the premises. The following day, at those points where the mole has reconstructed the collapsed tunnel, carefully punch a hole and drop in one teaspoonful of bait. Close the hole with a clod of dirt or turf of vegetation, being careful not to collapse the tunnel.

GOPHERS — With the aid of a long handled spoon remove the soft earth plug leading underground at a freshly thrown-out mound of soil. Using the long-handled spoon, introduce the bait as far down into the burrow system as possible. Close the opening to the surface, being careful not to allow loose dirt to cover the bait.

GROUND SQUIRRELS — Pour a teaspoonful of bait in each burrow and seal with dirt.

POISONOUS IF SWALLOWED

ANTIDOTE — If less than 10 minutes has passed since the poison was taken, give a tablespoon of salt in a glass of warm water. Have the victim lie down in a quiet, darkened room, and keep him warm. Call a physician immediately.

WARNING — Convulsive poison. Absorbed through the skin. Do not get in eyes, skin or on clothing. Wash thoroughly after handling. Keep children and domestic animals away from baited areas. Burn all pests killed. Store out of reach of children, away from animals and foodstuffs. Burn or bury container when empty.

ACTIVE INGREDIENTS

Strychnine Sulphate5%
INERT INGREDIENTS 99.5%

Poison Peanuts

**Destroys Moles, Gophers
and Ground Squirrels**

DANGER

KEEP OUT OF THE REACH OF CHILDREN

See antidote and other warning on back panel.
