

[373-84]

GENERAL

fogdeX is a ready-to-use insecticide formulated for use in industrial buildings such as flour mills, food plants, bakeries, restaurants, schools and hospitals.

DIRECTIONS FOR USE

FLYING INSECTS — fogdeX used as a space spray controls flies, mosquitoes and gnats. Spray at the rate of one (1) ounce of fogdeX per 1000 cubic feet of space.

CRAWLING INSECTS — fogdeX used as a space spray controls cockroaches, water bugs, crickets, spiders, exposed flour beetles, grain weevils, and meal moths. Spray at the rate of two (2) ounces of fogdeX per 1000 cubic feet of space. Spray thoroughly and repeat spraying of the infested areas, working the spray into cracks and other hiding places; hit the insects directly with the spray and repeat the application as necessary.

For the control of ants, spray ant trails and areas around door sills and window frames where pests may enter the premises.

For the control of fleas, remove animals from premises and spray all sleeping quarters of these animals, also spray floors, base boards and floor coverings.

FLOUR MILLS — Use fogdeX in a B&G or other type compression sprayer for the control of the exposed stages of flour and grain beetles, grain weevils, meal moths and similar insects. Sanitary practices such as cleaning of bins, elevator boots, elevator spouts, and around machines will help to insure control. Care should be taken to thoroughly treat all surfaces, cracks and crevices.

Repeat as often as necessary with fogdeX.

residex fogdeX

CAUTION! Keep out of Reach of Children
(See Side Panel for Additional Caution Statements)

RECEIVED
July 28, 1970

ACTIVE INGREDIENTS: 100%

Petroleum Distillates.....	97.60%
*Technical Piperonyl Butoxide.....	2.00%
Pyrethrins.....	.40%
Total	100.00%

*Equivalent to 1.60% of (butylcarbityl) (6 propyl)piperonyl Ether and 0.40% of related compounds.

DIRECTIONS FOR USE (continued)

RESIDUAL SPRAYS — Application of fogdeX can be made as a spray or with a brush. In either case, the surface should be thoroughly moistened. Use at the rate of one (1) gallon of fogdeX per 1000 square feet of surface at five day intervals. Three successive applications leave sufficient residual for the control of roaches, silverfish, ants, flies, mosquitoes and gnats.

For the control of bedbugs, apply lightly to all mattress surfaces in sufficient quantity to "mist" the fabric, and apply generously to beds and woodwork with special care taken to wet down all possible hiding places. Repeat treatment as often as necessary.

To control roaches, silverfish, crickets, spiders, and ants, fogdeX sprays should be directed toward the infested area or directly on the insect. Thorough application should be made by spraying walls, floors, kitchens, garbage receptacles, cracks and crevices, as well as all possible hiding places. Repeat treatment as often as necessary.

Care should be taken when fogging, to avoid staining of fabrics or susceptible surfaces.

CAUTION

Keep Out of Reach of Children. Harmful if Swallowed. Do Not Spray on Foodstuffs.

IN FOOD PROCESSING PLANTS — Foods should be removed or covered during treatment. All food processing surfaces should be covered during treatment or thoroughly cleaned before using. When using the product as a space spray in these areas, apply only when plant is not in operation.
