

1.)

100% of the foliage on the treated areas should be covered. The use of 1 quart per acre in a spray application is as follows: Mix 1 quart of the emulsion (such as Triton-X100 or Tween 85) in 5 gallons of fuel oil and emulsify in 30 gallons of water; then add with vigorous agitation and spray at moderate pressure. Complete coverage of foliage is essential. Apply during warm, sunny weather for best results. DO NOT GRAZE LIVESTOCK ON TREATED AREAS.

IMPORTANT NOTICE: Since the use of this product is beyond the control of the Seller, the Buyer assumes all risks of use or handling thereof in accordance with directions or not, as the Seller makes no warranty, expressed or implied, concerning this product.
