NOTES

1. Do not spray if rain is expected within 12 hours of spraying or GRO-SLO will be washed off the foliage before it can be absorbed by the plant. Rain occurring after 12 hours will not affect your results.
2. GRO-SLO will inhibit plant-growth whenever it is sprayed, so you should be careful to keep flowers and adjacent plants out of the direct spray.
3. GRO-SLO is not hazardous to use. Normal precautions should be exercised in spraying GRO-SLO. Like any garden spray, it should be kept out of the reach of children.
4. Spray grass, shrubs and ivy only once each season. For best results, treatment should be made in spring when growth is normally rapid. If treatment is made after the spring growing season, the results will not be as noticeable.

HOW GRO-SLO WORKS

A single spraying of GRO-SLO controls the growth of grass or shrubs for an entire season without harming it in any way. Here's how: (GRO-SLO temporarily stops cell division (this is what makes grass and shrubs grow). It does not affect cell expansion. This means grass and shrubs stay healthy and vigorous even though they do not grow taller.

CAUTION

Avoid inhaling of mist.
 Avoid contact with skin, eyes or clothing.
 May be harmful if swallowed.

IMPORTANT NOTICE Seller warrants that this product conforms to its chemical description and is reasonably fit for the purposes stated on the label when used in accordance with the directions and instructions specified on the label under normal conditions of use, but neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, express or implied, extends to the use of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to seller, and buyer assumes the risk of any such use.

TO CONTROL THE GROWTH OF GRASS

1. GRO-SLO spray may be used to control the growth of grass edges (6 inches) along walls and driveways, sidewalks and flowerbeds.
2. The best time to apply GRO-SLO is in the beginning of the growing season when the new grass is 1-2 inches high.
3. If you trim before application, GRO-SLO may be used immediately after mowing. If you trim after application, you should allow at least one week for the GRO-SLO to be absorbed by the grass before mowing.
4. Make certain the grass edges to be covered are free of debris before spraying. Otherwise the spray cannot effectively penetrate the grass.
5. GRO-SLO is used only for edging established turf, not for whole lawn areas or newly-planted grass.

DOSAGE

Use 2-2.3 gallons of GRO-SLO in 50 gallons of water per acre (8 oz. in 9 pints of water per 1,000 square feet).

TO CONTROL THE GROWTH OF SHRUBS AND IVY

1. GRO-SLO spray may be used to control the growth of Algerian ivy, Hahns ivy, Honeysuckle, Cissus, Ice Plant, Forsythia, Privet, Pyracantha, Myrtus, Xylosoma, Viburnum, Eugenia and Pittosporum.
2. The best time to apply GRO-SLO is in the spring when the plants are in full leaf.
3. If plants are the right size and shape, the spray application may be used immediately.
4. If plants require trimming, prune them to the proper shape first. Then wait until the new growth is 2-4 inches in length before spraying with GRO-SLO. By allowing the plants to regrow 2-4 inches you improve their appearance by hiding the clipped ends.

DOSAGE

Add 1-1.3 gallons of GRO-SLO to 50 gallons of water (4 ounces per gallon) and spray to wet all surfaces of leaves and bark to the drip point.

INSTRUCTIONS FOR USE

1. Attach your regular garden hose to the GRO-SLO unit.
2. Check to see that the black control-lever on top of the unit is turned to the horizontal off-position, then turn on your water pressure to a moderate level.
3. To begin spraying, turn the control lever so that it points toward you. This will open the valve and start the spray.
4. The GRO-SLO unit should be held close enough to the surface being sprayed so that a six-inch area is covered.
5. Spray each area until grass or foliage reaches the drip-point.
6. When you are ready to stop spraying, simply turn the control lever back to the off-position.
