COTTON

(Seedling Disease Complex - Rhizoctonia, Pythium and Fusarium)
SOIL IN-FURROW APPLICATION: At planting time, use 3 to 4 quarts per acre (per 13,000 linear feet based on 40 in. rows) mixed with 5 to 15 gallons of water. Apply the specified dosage to the soil around the seed and to the covering soil as it fills the furrow. The soil around the seed and the covering soil should be thoroughly mixed with the product. Two nozzles work best; center the front nozzle over the open furrow to spray

the soil around the seed and the rear nozzle to spray the covering soil as it fills the furrow.
The higher rates should be used when weather conditions are expected to be unfavorable for rapid germination, fields have a history of disease problems or minimum or low till programs are utilized.
Do not allow the feeding or grazing of cotton foliage by livestock.
Apply only at planting time.
Do not exceed 2 lbs. of PCNB active ingredient per acre in any one season applied as spray or granular formulations.
ROTATION RESTRICTION: Do not plant root crops in PCNB treated fields within 12 months of application unless PCNB is registered for use on those crops.
