PROTECTO - WAX

**WAXES FLOORS TO A HIGH SHINE
KILLS AND AIDS IN THE CONTROL OF
ROACHES, ANTS AND SILVERFISH**

Active Ingredients:

Gamma Isomer of Benzene Hexachloride

0.5%

Inert Ingredients

99.5%

DIRECTIONS

For best results on all types of floors, surface to be waxed must be clean and dry, free of gum, cleaning compound, grease and old wax. If floor has previously been waxed, be sure to remove all traces of old wax. This can best be done with our special wax-removing compound. Allow floor to dry thoroughly before applying wax. Apply PROTECTO WAX with a lamb's wool mop or applicator so that skin contact with the wax solution will be avoided, spreading wax over the surface in a full uniform film. No pressure is necessary. DON'T RUB, but apply wax by spreading it out thinly. Allow floor to dry for twenty minutes before walking on the surface. If the floor accumulates dirt or mud, the surface should be mopped with a neutral cleaner such as our SCRUBZIT.

ROACHES, ANTS AND SILVERFISH: Floors should be waxed regularly about every week or two. PROTECTO WAX should be applied with a brush on baseboards, crevices, drain pipes or wherever roaches run.

CAUTION

Avoid contamination of feed and foodstuffs. Avoid excessive inhalation and skin contact. In case of spillage on the skin, wash off with soap and water immediately.

Harmful if swallowed.

Keep out of reach of children.
