

CAUTION

Protect children, pets, domestic animals and wildlife from bait. If swallowed by humans, domestic animals, or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.

RAT-O-MICE contains Warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feedings, causes fatal hemorrhage in rats. It also contains an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for Warfarin. Do not reuse empty container. Crush, bury or destroy in a safe place.

- Follow directions for best results
- Ready to use—no mixing
- Sealed in freshness for the day you use it
