DCPA Reregistration Resubmission Groundwater 7/27/92

ACCEPTED
2 SEP 1992
Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. 407-317

**IMPERIAL
GARDEN WEEDER
CONTAINS DACTHAL R**

**A SELECTIVE PREEMERGENCE HERBICIDE FOR CONTROL OF ANNUAL
GRASSES AND CERTAIN BROADLEAVED WEEDS IN FLOWER AND
VEGETABLE GARDENS, TURF AND AGRONOMIC CROPS**

ACTIVE INGREDIENT:		
DCPA (dimethyl tetrachloroterephthalate)	5%
INERT INGREDIENTS:	95%
TOTAL	100%

^R Registered Trademark ISK Biotec Corporation

KEEP OUT OF REACH OF CHILDREN

CAUTION

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

Causes moderate eye irritation. Avoid contact with eyes or clothing. Wash thoroughly with soap and water after handling.

ENVIRONMENTAL HAZARDS

Collect and incorporate granules spilled on the soil surface. Do not apply directly to water or wetlands (swamps, bogs, marshes, and potholes). Do not contaminate water by cleaning of equipment or disposal of wastes.

Groundwater Advisory: Tetrachloroterephthalic acid, a breakdown product of Dacthal, is known to leach through soil as a result of agricultural and turf uses and has been found in groundwater which may be used for drinking water. Users are advised not to apply Dacthal to sand and loamy sand soils where the water table (groundwater) is close to the surface and where these soils are very permeable, i.e. well drained. Your local agricultural agencies can provide further information on the type of soil in your area and the location of groundwater used for drinking water.

DIRECTIONS FOR USE

USE ONLY WHEN WEARING THE FOLLOWING PROTECTIVE CLOTHING: Wear long-sleeved shirt and long-legged pants and chemical resistant gloves.

IMPORTANT! If the pesticide comes in contact with skin, wash off with soap and water. Always wash hands, face, and arms with soap and water before smoking, eating, drinking, or toileting.

AFTER USE: Before removing gloves, wash them with soap and water. Take off all work clothes and shoes. Shower using soap and water. Do not reuse contaminated clothing. Clothing worn during use must be laundered separately from household articles.

STATEMENT OF PRACTICAL TREATMENT

IF IN EYES: Flush with plenty of water. Call a physician if irritation persists.

STORAGE AND DISPOSAL

STORAGE: Store in original container, in a cool, dry, secure area, away from fertilizer, food, or feed. Keep container closed.

PESTICIDE DISPOSAL: Securely wrap original container in several layers of newspaper and discard in trash.

CONTAINER DISPOSAL: Do not reuse empty container. Wrap container and put in trash.

RECOMMENDATIONS

GENERAL INFORMATION: Garden Weeder is a 5% granular formulation for use as a preemergence application for control of crabgrass and other annual grasses and certain broadleaved weeds on mineral soils. Garden Weeder is recommended for use on TURF, HOME FLOWER GARDENS, NURSERY STOCK, STRAWBERRIES, VEGETABLES.

DIRECTIONS: For the control of grasses and some broadleaved weed species such as smooth and hairy crabgrass, green foxtail, yellow foxtail, lovegrass, witchgrass, carpetweed, common chickweed, lambsquarters, purslane, and Florida pusley, GARDEN WEEDEEER is recommended at the rate of 160 - 180 pounds per acre, 4 pounds per 1,000 square feet, or 1 pound (approximately 1 quart) for 250 square feet. A slightly higher rate of application (up to 210 pounds per acre of this product) may be required for control of barnyard grass, annual bluegrass, ground cherry, dodder, browntop, panicum, goosegrass, Johnsongrass from seed, redroot pigweed, and nodding spurge. When used at the recommended rate, up to 4 months weed control can be expected. Bermudagrass, Johnsongrass established from rhizomes, nutgrass galinsoga, wild mustard, ragweed, and velvetleaf have not been effectively controlled.

Spreader should be checked to determine whether they are applying the correct amount. The application should be made to a uniform weed-free surface within two to three days maximum following cultivation to prevent sub-surface germinating weeds from becoming established before the GARDEN WEEDEEER is activated. Disturbing the soil surface following application will reduce effectiveness. Rates of application can be reduced by banding.

BEST AVAILABLE COPY

If there is no effective rain within 3 to 4 days after application, sprinkler irrigation should be used for best results. GARDEN WEEDER can also be applied by shaker method. The ideal way of doing this is to measure off the area to be treated into small plots and then evenly spread the prescribed quantity of granules over the area; 1 pound (approximately 1 quart) treats 250 square feet (area 25 feet by 10 feet), 1 cupful treats 50 square feet. Any application should be made prior to weed seed germination.

TURF: Apply uniformly to established turfgrass at the rate of 200 pounds per acre in early spring before crabgrass and other annual grasses and broadleaved weeds germinate. This usually coincides with the time forsythia blossoms start to fall. One application, applied before weed germination in early spring usually provides season long control. Where spring seeding is necessary, there should be a delay of approximately 60 days after the application. If reseeding is done before 60 days after application, the amount of grass sown should be increased by 50% to insure thrifty stands. Early spring application may be applied to newly seeded turf after the exhibited greening of newly-sprouting turf-grass. Early spring application allows fall sowing of permanent grass. To control annual bluegrass and other erratic or late germinating grasses and weeds, a late summer or early fall application of 300 pounds per acre should supplement the early spring application.

The use of GARDEN WEEDER on bentgrass greens should be restricted to portions of greens infested with crabgrass and bentgreens which are known to be tolerant to GARDEN WEEDER. Application to Cohansey or Toronto Bents is not recommended. At the recommended rate of application, GARDEN WEEDER does not show herbicide injury or discoloration to established common lawn grasses. No more than the recommended rate should be used.

FLOWER GARDENS: Apply after establishment, or as supplemental application at the rate of 180 pounds per acre (4 lbs. per 1,000 square feet). Apply to the soil following establishment or setting out of flower beds. Where possible, this should be done early in the spring. Delayed or secondary applications can be made at any time provided beds have been cultivated and are free of weeds. Weed control up to four months or more may be expected following proper application.

NURSERY STOCK OR ORNAMENTAL PLANTINGS: Apply at lining out, late fall, early spring at the rate of 180 lbs. per acre (4 lbs. per 1,000 square feet). Applications should be made to soil recently cultivated to a uniform texture. These can be made immediately following lining-out of stock. With established plantings, application should be made following proper cultivation to remove existing weeds. Where possible, this should be done early in the spring. Late summer application may prove beneficial for control of fall-germinating weeds, if made following cultivation. Weed control up to four months or more may be expected following proper application.

STRAWBERRIES (new plantings): Apply at planting at the rate of 180 lbs. per acre. (Established plantings): Apply in fall and early spring at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil. For new beds, apply 180 pounds at transplanting. Application to established plantings should be made in fall and early spring. Applications of 160 - 180 pounds per acre may be applied to control late summer or early fall germinating weeds. DO NOT apply after first bloom. These applications can be made directly over plants without injury.

1105

BROCCOLI, BRUSSELS SPROUTS, CAULIFLOWER AND CABBAGE: Apply at seeding or transplanting at the rate of 160 - 180 pounds per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil. Granules can be applied directly over transplants without injury. If weeds have emerged, crop should be clean cultivated or weeded prior to application.

BEANS (dry or snap) SOUTHERN PEAS (blackeyed): Apply at seeding at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil at time of seeding.

CUCUMBERS, SQUASH (winter and summer) MELONS (cantaloupe, watermelon, honeydew). Apply 4 - 6 weeks after seeding at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil 4 to 6 weeks after seeding. Crops should be cultivated or weeded prior to application if weeds have emerged.

COLLARDS, KALE, MUSTARD GREENS, TURNIPS (greens and roots): Apply at seeding at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil at time of seeding.

GARLIC AND ONIONS: Apply at seeding or transplanting or at layby on onions at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil. Granules can be applied directly over transplants without injury; layby applications can be made on onions up to 14 weeks after planting or transplanting. Should weeds emerge prior to layby, onions should be cultivated or weeded prior to application.

LETTUCE (leaf): Apply 1 - 3 weeks after emergence at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply one application only, uniformly to the soil but not later than 3 weeks after emergence.

LETTUCE (head): Apply 1 - 6 weeks after seeding at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply one application only, uniformly to the soil, 1 - 6 weeks after seeding.

POTATOES (whole or cut pieces): Apply at planting, dragoff, or layby at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil at planting, or if the top of the beds are to be dragged off, **GARDEN WEEDER** should be applied after dragoff. Layby application can be made up to 9 weeks after planting. If weeds have emerged at layby, the crop should be weeded or cultivated prior to application.

SWEET POTATOES AND YAMS: Apply at transplanting, or layby at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil at transplanting. **GARDEN WEEDER** can be applied directly over transplants without injury. Layby applications can be made up to 6 weeks after transplanting. If weeds have emerged, the crop should be cultivated or weeded prior to making the application.

TOMATOES: Apply 4 - 6 weeks after transplanting at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Application uniformly to the soil should be confined to a period of 4 to 6 weeks after transplanting.

GARDEN WEEDER can be applied directly over the transplants without injury. If weeds have emerged, the crop should be cultivated or weeded prior to making the application.

EGGPLANT AND PEPPERS: Apply at transplanting or layby at the rate of 160 - 180 lbs. per acre (4 lbs. per 1,000 square feet). Apply uniformly to the soil at transplanting. **GARDEN WEEDER** can be applied directly over transplants without injury. Layby application can be made up to 6 weeks after planting. If weeds are present, the crop should be weeded or cultivated prior to making the layby application.
