[413-62]

PYRENONE SPRAY

PYRENONE SPRAY combines effective knockdown and kill, when used as directed.

DIRECTIONS FOR APPLYING

Fog For Flying Insects

Use a good steam, compressed air or fog generator to dispense Pyrenone Spray into atmosphere as a fine mist. For house flies, mosquitoes and gnats in food processing establishments, or Indian Meal Moth and Angumois Moth in grain storage or processing plants, use at the rate of 2 to 3 ounces per 1,000 cubic feet (1 gallon per 40,000 cubic feet). Doors, windows and outside ventilators must be closed to contain mist for 20 to 30 minutes. Repeat treatment as needed. Remove animals or pets during operation.

For Crawling Insects

Such as roaches, best results are obtained by using a coarse mist spray, applying freely. This is a contact spray so best results are obtained when insects are hit by it. Thoroughly spray all cracks and crevices where the insects could hide, particularly in areas where plumbing is installed.

DIRECTIONS FOR APPLYING

Stored Grains

Make a light spray applicationgallons to 1,000 square feet-directly (the grain surface as an aid in the contro of Indian Meal Moth, Angoumois Mot and other grain infesting insects that an feeding on or near the surface of th grain. Make one or more application or as needed throughout the storag period.

Mills and Warehouses

Spray empty bins freely as well a boots, conveyors, floors, or any place where debris accumulates. Follow good housekeeping practices of heavy-dur vacuuming and cleaning, and then thor oughly spray premises. Planned applica tions of Pyrenone Spray between fumi gations will greatly reduce insect infest tations, such as Granary Weevil, Indian Meal Moth, Confused Flour Beetle.

Grain Storage Bins

Thoroughly spray webbing and break it up if possible. Empty bins should be thoroughly sprayed with our Mill and Farm Bin Spray before storing grain Particular attention should be given t killing insects in farm bins.
