READ ENTIRE LABEL. USE STRICTLY IN ACCORDANCE WITH DIRECTIONS AND CAUTION.

DIRECTIONS

This product is specially formulated to kill mosquitoes, flies, and many other small flying insects when used in the BVI Electric fogger. Small particles of insecticide produced by fogging remain suspended in the air longer than particles produced by a standard hand sprayer. As a result, the fogging method is more effective for killing certain flying insects outdoors. Use this product exactly as it comes from the can. The lasting effects of fog depend on weather conditions and if a wet or dry fog is produced. Wet fog contains larger particles of insecticide which have not been completely vaporized. Therefore, dry fog is desirable.

Do not attempt to fog your patio or yard when the wind velocity is greater than 5 miles per hour as the fog will be carried away before it has an opportunity to be effective. The ideal time for fogging is around dusk when the wind usually dies down and the temperature at ground level is somewhat lower than that of the air a few feet off the ground. Under such conditions, the fog in the treated area will linger for a longer period of time.

It is not advisable or necessary to hold the BVI Electric Fogger close to any plants or shrubbery to obtain satisfactory results. It is recommended that the fogger be held five (5) feet or more from the object or area being treated.

CAUTION

Combustible Mixture of F.D.N.Y.C. of A. Do not fog near fire or open flame. Avoid contaminating milk, milk equipment, and utensils.

This product is toxic to fish. This product is toxic to birds. Apply this product only as specified on this label.

KEEP OUT OF REACH OF CHILDREN AS OIL BASE INSECTICIDES ARE HARMFUL IF SWALLOWED. Babies and small children should not be exposed to fog. If insecticide is swallowed or illness results from exposure, CALL PHYSICIAN AT ONCE.

Do not reuse empty container. Destroy it by perforating or crushing. Bury or discard in a safe place.
