

1. Pour 4 gallons water in engine tank.
2. Add 1 quart of this in used motor oil to try.
3. With vacuum, pick up the residue and filter it
in the engine.

4. Add 1 quart of this in used motor oil.
5. Run engine for 10 minutes to be cleaned. Repeat with
fresh. Do not try. For more information see above.

Prevents the rusting of metal parts. It is used
by capillary action to penetrate and clean. It has been
found to inhibit the growth of acid causing bacteria. It is
used in the following manner:

- (1) Pour 1 quart of this in used motor oil.
- (2) Run engine for 10 minutes to be cleaned.
- (3) With vacuum, pick up the residue and filter it.
