Dear Ms. Samuel:

Subject: Revised Formulation Described in Confidential Statement of
~~Formula Dated 7/11/89 and Label Amendments Deleting References~~
to Methylene Chloride
EPA File Symbol/Reg. No. 432-608

The amendments referred to above, submitted in connection with registration under section 3(c)(7)(A) of the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, are acceptable subject to the following comments.

1. Petroleum distillate is listed as an active ingredient in the ingredient statement. Since the Confidential Statement of Formula (CSF) dated 7/11/89 lists it as a solvent, you should either report the petroleum distillate under inert ingredients on the label or provide the registration number for the source product and justify its insecticidal properties.

2. Submit a label amendment to replace the statement "All food processing surfaces should be thoroughly cleaned before using" with "Remove or cover in such a way as to prevent contamination all feed or foodstuffs. Food contact surfaces and equipment must be washed with an effective cleaning compound followed by a potable water rinse after

treatment. Facilities and equipment in federally inspected meat and poultry plants must be washed with an effective cleaning compound followed by a potable water rinse after treatment."

A stamped copy of your label is enclosed for your records.

Sincerely yours,

Phil Hutton

Product Manager (17)

Insecticide-Rodenticide Branch

Registration Division (N7505C)

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

This aerosol is designed for use in adjustable automatic activators set to dispense a 100 mg. dose every 15 minutes for 8 hours while the plant or institution is not in operation.

STORAGE: Keep in locked storage area.
CONTAINER DISPOSAL: Replace cap and discard container in trash.

Use one aerosol in an automatic activator for each 6,000 cubic feet of room space to be treated. Install the activator on a wall approximately 7 feet from the floor. Do not install directly over any food handling or dispensing area. Never locate automatic activators in drafty hallways or where air currents are excessive. Select areas where the air currents are least noticeable. The rate of air change, shape of space to be treated, humidity and temperature affect insect activity and insect control. One unit per 6,000 cubic feet should be considered as an average ratio. Adjust the ratio depending upon the conditions under which the automatic activator is used.

When properly located, the effectiveness of the SBP-1382 formula will be noticeable within one hour after the activator is started. After one hour of operation, enough insecticide is suspended in the air to kill a substantial proportion of the house flies, mosquitoes and gnats present.

This 12 ounce aerosol contains enough material to operate 825 hours, or 103 days on an 8 hour basis. It is suggested the aerosol be changed once every 3 months on an 8 hour use basis. Also the activator should be periodically checked to assure it is operating only as the 8 hours period. As with any method of insect control, improved performance is achieved when good sanitary practices and other supplementary fly control methods are used.

SBP-1382® INSECTICIDE AEROSOL 1% FORMULA III FOR TIMED DISPENSER

Authorized by USDA for use in edible product areas of official establishments operating under the Meat, Poultry, Shell Egg Grading and Egg Products Inspection Programs.

ACTIVE INGREDIENTS:

*Resmethrin [5-(phenylmethyl)-3-(teranylmethyl)-2,2-dimethyl-3-(2-methyl-1-propenyl)cyclopropanecarboxylate]..... 1.00%w/w
Petroleum Distillate..... 8.00%
