WHAT MERIT 0.15 G LAWN AND GARDEN INSECTICIDE DOES	White grubs can cause extensive damage to turf by feeding on grass roots. Affected turf turns yellow, then brown, and is easily pulled up in pieces with your hands. Mole crickets can seriously damage lawns by their tunneling activity. Some species also feed on the grass roots, as well. MERIT 0.15 G prevents turf damage by killing grubs, European crane fly larvae, and mole crickets when they are newly hatched and before they can cause turf damage.
	MERIT 0.15 G works best when applied before grubs, European crane fly larvae, and mole crickets hatch. The active ingredient will remain in the root zone of the turf until the eggs of grubs, European crane fly larvae, or mole crickets hatch. These newly hatched insects are highly susceptible to MERIT, and are killed before they become large enough to cause turf damage. MERIT 0.15 G also kills grubs, European crane fly larvae, and mole crickets in landscaped ornamental areas containing flowers, ground covers, shrubs and trees.
	If you have questions regarding the best time to make applications in your area, you can consult your local County University Extension Office. Be sure that you describe the product you are using when seeking such advice.
